

# MOSFET – Single, P-Channel, POWERTRENCH®

**-30 V, -11 A, 13.5 mΩ**

## FDMA6676PZ

### Description

This device is an ultra low resistance P-Channel FET. It is designed for power line load switching applications and reverse polarity protection. It is especially optimized for voltage rails that can climb as high as 25 V. Typical end systems include laptop computers, tablets and mobile phone. Applications include battery protection, input power line protection and charge path protection, including USB and other charge paths. The FDMA6676PZ has an enhanced  $V_{GS}$  rating of 25 V specifically designed to simplify installation. When used as reverse polarity protection, with gate tied to ground and drain tied to V input, it is designed to support operating input voltages that can raise as high as 25 V without the need for external Zener protection on the gate. Its small 2 x 2 x 0.8 mm form factor make it an ideal part for mobile and space constrained applications.

### Features

- Max  $r_{DS(on)}$  = 13.5 mΩ @  $V_{GS} = -10$  V
- 25 V  $V_{GS}$  Extended Operating Rating
- 30 V  $V_{DS}$  Blocking
- 2 x 2 mm Form Factor
- Low Profile – 0.8 mm Maximum
- Integrated Protection Diode
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

| $Q_{rr}$ | Reverse Recovery Charge               |                                                           |  | 9    | 18   | nC |

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

- $R_{\theta JA}$  is determined with the device mounted on a 1 in<sup>2</sup> pad 2 oz copper pad on a 1.5 x 1.5 in. board of FR-4 material.  $R_{\theta CA}$  is determined by the user's board design.

a.  $52^\circ\text{C/W}$  when mounted on a 1 in<sup>2</sup> pad of 2 oz copper.

b.  $145^\circ\text{C/W}$  when mounted on a minimum pad of 2 oz copper.

- Pulse Test: Pulse Width < 300  $\mu\text{s}$ , Duty cycle < 2.0%.
- Pulse  $I_D$  refers to Forward Bias Safe Operation Area.
