

- Features:
- Miniature metal film for tight size constraints
 - Superior electrical, TCR performances
 - Flameproof silicone coating is standard
 - 1-watt part in 1/4-watt package,
2-watt part in 1/2-watt package,
½-watt part in 1/8-watt package
 - RoHS compliant

Electrical Specifications							
Type / Code	Power Rating (Watts) @ 70°C	Maximum Working Voltage (1)	Maximum Overload Voltage	Resistance Temperature Coefficient	Ohmic Range (Ω) and Tolerance		
					0.5%	1%	5%
RNS12	0.5W	400V	600V	±50 ppm/°C ±100 ppm/°C ±200 ppm/°C	100 - 511K	10 - 1M	10 - 1M
RNS1	1W	500V	700V	±50 ppm/°C ±100 ppm/°C ±200 ppm/°C	100 - 511K	10 - 1M	10 - 1M
RNS2	2W	600V	800V	±50 ppm/°C ±100 ppm/°C ±200 ppm/°C	100 - 511K	10 - 1M	10 - 1M

(1) Rated voltage = √Power Rating x Nominal Resistance or Maximum Working Voltage, whichever is lower

Mechanical Specifications

Performance Characteristics		
Item	Performance	Test Method
Temperature Coefficient of Resistance	± 50ppm/°C ± 100ppm/°C ± 200ppm/°C	Measure resistance (R ₀) at room temperature (t), after that, measure again the resistance (R) at 100°C higher than room temperature $TCR = \frac{R - R_0}{R_0} \times \frac{10^6}{(t + 100) - t} \text{ (ppm/°C)}$
Voltage Proof	1. Change of Resistance ≤ ±(0.5% + 0.05Ω)	Lay the resistor on the 90° angle metal V block and apply rated AC voltage for one minute.
Insulation Resistance	≥ 1,000 Mohm	Lay the resistor on the 90° angle metal V block and apply 500Vdc between V block and lead wire for a minute. The insulation resistance shall be measured while applying the voltage.

Performance Characteristics																	
Item	Performance	Test Method															
Solvent Resistance	There shall be no damage on the insulating surface.	Soak in a Isopropyl alcohol for 5 minutes. After drying up for 5 minutes, stress of 5N is added with absorbent cotton and it does by five round trips at the rate of one round trip a second.															
Overload (Short Time)	Change of Resistance $\leq \pm(1\% + 0.05\Omega)$	Apply 2.5 times rated voltage or max. overload voltage whichever is lower for 5 seconds and leave in room temperature for one hour after test.															
Robustness of Termination	Change of Resistance $\leq \pm(0.2\% + 0.05\Omega)$	Tensile: The body of the resistor is fixed, a static load is added in the direction of drawing out of the terminal, and it maintains it for 10 ± 1 seconds. Tensile strength: 10N Bend: Component body shall be fixed so that terminals are perpendicular to the floor. A static load specified below shall be applied to the terminal acting in a direction away from the body. The body of piezoelectric oscillator shall then be inclined through an angle of 90° in the vertical plane and then returned to its initial position in 2 or 3 seconds then the body shall be inclined to the reversed direction through an angle 90° and then returned to its initial position in 2 or 3 seconds. Bending strength: 5N															
Resistance to Soldering Heat	Change of Resistance $\leq \pm(0.3\% + 0.05\Omega)$	Dip the lead into a solder bath having a temperature of $260^\circ\text{C} \pm 5^\circ\text{C}$ up to 1.5 ± 0.5 mm from the body of the resistors and hold it for 10 ± 0.5 seconds and leave in room temperature for one hour after test.															
Solderability	More than 95% of the surface of the lead shall be covered by new solder.	Dip the lead into a solder bath having a temperature of $245 \pm 5^\circ\text{C}$ up to 1.5 ± 0.5 mm from the body of the resistors and hold it form 5 ± 0.5 seconds.															
Rapid Change of Temperature	Change of Resistance $\leq \pm(1\% + 0.05\Omega)$	The resistor shall be subjected to 5 continuous cycles, each as show in the table below: <table border="1"> <thead> <tr> <th></th><th>Temperature</th><th>Duration</th></tr> </thead> <tbody> <tr> <td>1</td><td>Minimum Operating Temperature</td><td>30 min.</td></tr> <tr> <td>2</td><td>Standard Athmospheric Condition</td><td>≤ 30 sec.</td></tr> <tr> <td>3</td><td>Max Operating Temperature</td><td>30 min.</td></tr> <tr> <td>4</td><td>Standard Atmospheric Condition</td><td>≤ 30 sec.</td></tr> </tbody> </table>		Temperature	Duration	1	Minimum Operating Temperature	30 min.	2	Standard Athmospheric Condition	≤ 30 sec.	3	Max Operating Temperature	30 min.	4	Standard Atmospheric Condition	≤ 30 sec.
	Temperature	Duration															
1	Minimum Operating Temperature	30 min.															
2	Standard Athmospheric Condition	≤ 30 sec.															
3	Max Operating Temperature	30 min.															
4	Standard Atmospheric Condition	≤ 30 sec.															
Vibration	Change of Resistance $\leq \pm(0.5\% + 0.05\Omega)$	Apply 1.5mm amplitude vibration to three directions perpendicular to each other 2 hours each, total 6 hours. Vibrating frequency is 10Hz-55Hz-10Hz cycle in 1 minute sweeping and repeat cycle.															
Damp Heat, Steady State	Change of Resistance $\leq \pm(3\% + 0.05\Omega)$	In the chamber having temp. $40 \pm 2^\circ\text{C}$ and relative humidity $93 \pm 3\%$, apply one percent of the rated power, 1.5 hour ON, 0.5 hour OFF for 1000 hours and leave in room temperature for one hour after test.															
Endurance at 70°C	Change of Resistance $\leq \pm(3\% + 0.05\Omega)$	At $70 \pm 2^\circ\text{C}$, apply rated DC voltage 1.5 hour ON, 0.5 hour OFF for 1000 hours and leave in room temperature for one hour after test.
