Piezoelectric Actuator Driver

BU64562GWZ

●General Description

The BU64562GWZ is designed to drive Piezo motors for camera auto focus.

It has an integrated D/A converter for setting the output voltage.

This lens driver includes the slope sequence to reduce the driving noise of Piezo actuator.

The functional lens system can be controlled through 2-wire serial interface (I^2C BUS compatible).

●Features

- Ultra-small chip size package
- Low ON-Resistance Power CMOS output
- Built-in 15 MHz Oscillator (OSC)
- 2-wire serial interface (I^2C BUS compatible)
- 1.8 V can be put into each control input terminal
- Slew rate control function of output voltage
- Standby current consumption 0 µA (Typ.)

●Applications

- Auto focus of cell phone
- Auto focus of Digital still camera
- Camera Modules
- Lens Auto focus
- Web, Tablet and PC Cameras

●Key Specifications

- PMOS ON Resistance: 0.70 Ω (Typ.)
- NMOS ON Resistance: 0.70 Ω (Typ.)
- Standby current consumption: 0 µA (Typ.)
- High precision 15MHz Oscillator: ± 3 %
- Operating temperature range: - 25 to + 85 °C

●Package

	W(Typ.) x D(Typ.) x H(Max.)
UCSP30L1	1.90 mm x 0.77 mm x 0.33 mm

●Typical Application Circuit

Figure 1. Typical Application Circuit

○Product structure : Silicon monolithic integrated circuit　○This product is not designed protection against radioactive rays

●**Description of Functions**

1) The structure of the driving wave for Piezo actuator

$$1\text{cycle} = (ta + 1) + brake1 + tb + brake2 + (4 \times osc)$$
*9   The state at osc = 0x0 or osc ≠ 0x0 and HiZE = 0x0 is HiZ.
*10   At mode = 0, the output logic is a setting of a short brake.

dir (Address: 0x0, Data: D[0])	Output①	Output②	Note
0	OUTA	OUTB	Move to the direction of Macro
1	OUTB	OUTA	Move to the direction of infinity

Driving wave is set by the 4 parameters of ta / brake1 / tb / brake2.
OSC period is set by the OSC (Internal clock basic cycle setting).

ta   : On section is (ta + 1 - 1) = ta counts for Forward (Reverse) state.
brake1   : On section is (brake1 - 1) count for short brake state.
tb   : On section is (tb1 - 1) count for Reverse (Forward) state.
brake2   : On section is (brake2 - 1) count for short brake state.

(Ex.) In case of setting 1 cycle = 10.67 µs, ta = 1.27 µs, brake1 = 0.13 µs, tb = 1.93 µs, brake2 = 7.07 µs.
    osc[2:0](= Basic cycle setting) = 0x0 （ = Basic cycle = 66.67 ns）, and ta / brake1 / tb / brake2 setting below;

ta[7:0]	= 0x13	= 19 count	→ ON section = 19 + 1 − 1 = 19 count
brake1[7:0]	= 0x03	= 3 count	→ ON section = 2 count
tb[7:0]	= 0x1E	= 30 count	→ ON section = 29 count
brake2[7:0]	= 0x6B	= 107 count	→ ON section = 106 count

TSZ22111・15・001

14/20

TSZ02201-0H2H0B600450-1-2
9.Oct.2012 Rev.001
4) STOP sequence
It changes to the next state after short brake 16.7 µs (Typ.) when the state transition.
Shown in the following while the sequence is operating is done.

- When normal sequence ends
- When normal sequence cancels

* Special condition
There is a possibility that is not the pulse when {0x6, 0x5} address is small when Dir and START Bits are input at the same time after reset is released.

5) Output rise, fall waveform
A voltage = (VM voltage) - (Simulation DC output current at the only Resistance load) x (Upper side output ON-Resistance)

B voltage = (Simulation DC output current at the only Resistance load) x (Lower side output ON-Resistance)

(Ex.) In case, the load is Resistance element = 2 Ω, capacity element = 0.033 µF
25 °C, VM = 3 V, Upper side output ON-Resistance = 1 Ω, Lower side output ON-Resistance = 1 Ω

A voltage = (VM voltage) - ((VM voltage) / (Load(R) + Total ON-Resistance)) x (Upper side ON-Resistance)
= 3 V - (3 V / (2 Ω + (1 Ω + 1 Ω))) x 1 Ω
= 2.25 V

B voltage = ((VM voltage) / (Load(R) + Total ON-Resistance)) x (Lower side ON-R)
= (3 V / (2 Ω + (1 Ω + 1 Ω))) x 1Ω
= 0.75 V

Rise time = Trise (A x 0.1 to A x 0.9)   = 100 ns (Typ.)
Fall time   = Tfall ((VM - B) x 0.9 + B to (VM - B) x 0.1 + B)   = 100 ns (Typ.)

6) Setting method of VM voltage slope
The slope can be applied to the VM voltage by setting V1[7:0], V2[7:0], step1[2:0] and step2[4:0].
V1 and V2 are bits for setting VM voltage. The step1 and step2 are bits for setting VM slope.
VM voltage increase that it set it every 50 μs.

It is necessary to enlarge the setting of V2 more than V1.
LSB of each setting bits does not depend on the VCC voltage (LSB = 4.8 / 255 = 18.8 mV (Typ.)).
●Normal function
Setting V2[7:0] (V1[7:0] = 0x00, step1[2:0] = 0x0, step2[4:0] = 0x00)
●One time slope
Setting V2[7:0] and step2[4:0] (V1[7:0] = 0x00, step1[2:0] = 0x0 and cntck[2:0] = 0x0)

①　= 50 μs × V2[7:0] / step2[4:0]
②　= 50 μs (The first step output the keeping voltage.)
③　= 50 μs × (V2[7:0] / step2[4:0] - 1)

TSZ02201-0H2H0B600450-1-2
9.Oct.2012 Rev.001

●Two times slope
   1. Setting V1[7:0], V2[7:0], step1[2:0] and step2[4:0] (cntck[2:0] = 0x0)
  ①   = 50 µs × V1[7:0] / step1[2:0]
  ②   = 50 µs × (V2[7:0] - V1[7:0]) / step2[4:0]
  ③   = 50 µs (The first step output the keeping voltage.)
  ④   = 50 µs × ((V2[7:0] - V1[7:0]) / step2[4:0] – 1)
  ⑤   = 50 µs × V1[7:0] / step1[2:0]

  2. Setting V1[7:0], V2[7:0] and step2[4:0] (step1[2:0] = 0x0 and cntck[2:0] = 0x0)
  ①   = 50 µs × (V2[7:0] - V1[7:0]) / step2[4:0]
  ②   = 50 µs (The first step output the keeping voltage.)
  ③   = 50 µs × (V2[7:0] - V1[7:0]) / step2[4:0]

  3. Setting V1[7:0], V2[7:0] and step1[2:0] (step2[4:0] = 0x00 and cntck[2:0] = 0x0)
  ①   = 50 µs × V1[7:0] / step1[2:0]
  ②   = 50 µs (The first step output the keeping voltage.)
  ③   = 50 µs × V1[7:0] / step1[2:0]

●**Operational Notes**

1) Absolute maximum ratings
Use of the IC in excess of absolute maximum ratings, such as the applied voltage (VCC) or operating temperature range (Topr), may result in IC damage. Assumptions should not be made regarding the state of the IC (short mode or open mode) when such damage is suffered. A physical safety measure, such as a fuse, should be implemented when using the IC at times where the absolute maximum ratings may be exceeded.

2) Storage temperature range (Tstq)
As long as the IC is kept within this range, there should be no problems in the IC's performance. Conversely, extreme temperature changes may result in poor IC performance, even if the changes are within the above range.

3) Power supply and wiring
Be sure to connect the power terminals outside the IC. Do not leave them open. Because a return current is generated by a counter electromotive force of the motor, take necessary measures such as putting a Capacitor between the power source and the ground as a passageway for the regenerative current. Be sure to connect a Capacitor of proper capacitance (0.1 to 10 µF) between the power source and the ground at the foot of the IC, and ensure that there is no problem in properties of electrolytic Capacitors such as decrease in capacitance at low temperatures. When the connected power source does not have enough current absorbing capability, there is a possibility that the voltage of the power source line increases by the regenerative current exceeds the absolute maximum rating of this product and the peripheral circuits.
Therefore, be sure to take physical safety measures such as putting a zener diode for a voltage clamp between the power source the ground.

4) Ground terminal and wiring
The potential at GND terminal should be made the lowest under any operating conditions. Ensure that there are no terminals where the potentials are below the potential at GND terminal, including the transient phenomena.
Also prevent the voltage variation of the ground wiring patterns of external components. Use short and thick power source and ground wirings to ensure low impedance.

5) Thermal design
Use a proper thermal design that allows for a sufficient margin of the power dissipation at actual operating conditions.

6) Pin short and wrong direction assembly of the device
Use caution when positioning the IC for mounting on printed circuit boards. The IC may be damaged if there is any connection error or if positive and ground power supply terminals are reversed. The IC may also be damaged if pins are shorted together or are shorted to other circuit's power lines.

7) Avoiding strong magnetic field
Malfunction may occur if the IC is used around a strong magnetic field.

8) ASO
Ensure that the output transistors of the motor driver are not driven under excess conditions of the absolute maximum ratings and ASO.

9) TSD circuit
This IC incorporates a TSD circuit.   If the temperature of the chip reaches the below temperature, the motor coil output will be opened. The TSD circuit is designed only to shut off the IC to prevent runaway thermal operation.   It is not designed to protect the IC or to guarantee its operation.   Do not continue to use the IC after use of the TSD feature or use the IC in an environment where the its assumed that the TSD feature will be used.

| TSD ON temperature [°C] (Typ.)	Hysteresis temperature [°C] (Typ.)
150	20

10) PS terminal
Release PS after rising VCC. PS works resetting logic as well. If keep connecting PS with VCC, resetting cannot be done cause malfunction or destroy.

Notice

Precaution on using ROHM Products

1. Our Products are designed and manufactured for application in ordinary electronic equipments (such as AV equipment, OA equipment, telecommunication equipment, home electronic appliances, amusement equipment, etc.). If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment [Note 1], transport equipment, traffic equipment, aircraft/spacecraft, nuclear power controllers, fuel controllers, car equipment including car accessories, safety devices, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.

(Note1) Medical Equipment Classification of the Specific Applications

JAPAN	USA	EU	CHINA
CLASSⅢ	CLASSⅢ	CLASSⅡb	CLASSⅢ
CLASSⅣ		CLASSⅢ	

2. ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
    - [a] Installation of protection circuits or other protective devices to improve system safety
    - [b] Installation of redundant circuits to reduce the impact of single or multiple circuit failure

3. Our Products are designed and manufactured for use under standard conditions and not under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc, prior to use, must be necessary:
    - [a] Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
    - [b] Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
    - [c] Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl_2, H_2S, NH_3, SO_2, and NO_2
    - [d] Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
    - [e] Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
    - [f] Sealing or coating our Products with resin or other coating materials
    - [g] Use of our Products without cleaning residue of flux (even if you use no-clean type fluxes, cleaning residue of flux is recommended); or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
    - [h] Use of the Products in places subject to dew condensation

4. The Products are not subject to radiation-proof design.

5. Please verify and confirm characteristics of the final or mounted products in using the Products.

6. In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse. is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.

7. De-rate Power Dissipation (Pd) depending on Ambient temperature (Ta). When used in sealed area, confirm the actual ambient temperature.

8. Confirm that operation temperature is within the specified range described in the product specification.

9. ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

Precaution for Mounting / Circuit board design

1. When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.

2. In principle, the reflow soldering method must be used; if flow soldering method is preferred, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

Precautions Regarding Application Examples and External Circuits

1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.

2. You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

Precaution for Electrostatic

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of Ionizer, friction prevention and temperature / humidity control).

Precaution for Storage / Transportation

1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
    [a] the Products are exposed to sea winds or corrosive gases, including Cl2, H2S, NH3, SO2, and NO2
    [b] the temperature or humidity exceeds those recommended by ROHM
    [c] the Products are exposed to direct sunshine or condensation
    [d] the Products are exposed to high Electrostatic

2. Even under ROHM recommended storage condition, solderability of products out of recommended storage time period may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is exceeding the recommended storage time period.

3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.

4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

Precaution for Product Label

QR code printed on ROHM Products label is for ROHM's internal use only.

Precaution for Disposition

When disposing Products please dispose them properly using an authorized industry waste company.

Precaution for Foreign Exchange and Foreign Trade act

Since our Products might fall under controlled goods prescribed by the applicable foreign exchange and foreign trade act, please consult with ROHM representative in case of export.

Precaution Regarding Intellectual Property Rights

1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data. ROHM shall not be in any way responsible or liable for infringement of any intellectual property rights or other damages arising from use of such information or data.:

2. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the information contained in this document.

Other Precaution

1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.

2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.

3. In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.

4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.

General Precaution

1. Before you use our Pro ducts, you are requested to care fully read this document and fully understand its contents. ROHM shall n ot be in an y way responsible or liabl e for fa ilure, malfunction or acci dent arising from the use of a ny ROHM's Products against warning, caution or note contained in this document.

2. All information contained in this docume nt is current as of the issuing date and subj ect to change without any prior notice. Before purchasing or using ROHM's Products, please confirm the la test information with a ROHM sale s representative.

3. The information contained in this doc ument is provi ded on an "as is" basis and ROHM does not warrant that all information contained in this document is accurate an d/or error-free. ROHM shall not be in an y way responsible or liable for an y damages, expenses or losses incurred b y you or third parties resulting from inaccur acy or errors of or concerning such information.
