

## Features

- Supply voltage: 1.5 ~ 5.5V
- ultra-low On Resistance: 4.5 Ω
- -3dB Bandwidth :550MHz
- Rail-to-Rail Signal Range
- Break-Before-Make Switching
- Low quiescent current over an Expanded Control Input Range
- Standard Products are Pb-free and halogen-free
- Packaging: SOP-16

## Applications

- Other electronics equipment
- Audio and Video Signal Routing
- LCD Monitor, TV and Set-Top Box
- Cell phones, PDA, Digital Camera and Notebook

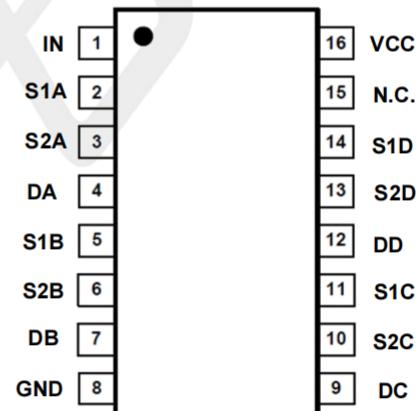

## PIN DESCRIPTION

## General Description

The is a high performance, quad, Single Pole Double Throw (SPDT) analog switch that features ultra-low Ron of 4.5 Ω (typical) at 4.5V VCC. The operates over a wide VCC range of 2.3V to 4.5V and is designed for break-before-make operation. The select input is TTL-level compatible.

The is also featured with smart circuitry to minimize VCC leakage current even when the control voltage is lower than VCC supply voltage. This feature suits mobile handset applications by allowing direct interface with baseband processor general-purpose IO with minimal battery consumption. In other word, there is no need of additional device to shift control level to be the same as that of VCC in real application.

### Note:

- “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied.
- The input and output negative voltage ratings may be exceeded if the input and output diode current ratings are observed.
- Control input must be held high or Low, it must not float.
