

Analog signal isolator 2-channel IM31-22EX-U

Normalized active voltage or current signals are transmitted galvanically isolated from the Ex area to the non-Ex area via the 2-channel analog signal isolator IM31-22EX-U.

The device is equipped with two input circuits of 0/2...10 V or 0/4...20 mA and two short-circuit proof output circuits of 0...10 V.

The transmission characteristic is adjusted via a DIP switch on the front. In switch position 1:1 the input signals are transmitted without interference and made available at the outputs in the non-Ex area. In "LZ" switch position, a dead-zero signal at the input (0...10 V or 0...20 mA) is converted and provided as a live-zero signal at the output (0...10 V).

A green LED indicates operational readiness.
