## Part # HFLH-M8-15ZI, Type HFLH™ Hard Panel Studs - Metric

- Installs into thinner, harder, high strength steel materials (high strength steel sheets up to 700 MPa maximum ultimate tensile)
- Allows overall weight reduction for all vehicles
- Provides lower installed cost

### Compare to other thin sheet fastening devices:

- Addresses environmental concerns
- Lighter weight
- Close to edge of panel mounting
- No embossing required
- Hardened stud material provides stronger thread strength
- Can be installed automatically using press or in-die technology

### Specifications

|                             |           |
|-----------------------------|-----------|
| <b>Thread Size x Pitch</b>  | M8 x 1.25 |
| <b>Thread Code</b>          | M8        |
| <b>Length Code</b>          | 15        |
| <b>Min. Sheet Thickness</b> | 1.5 mm    |

|                                              |                                                           |                                                                                    |
|----------------------------------------------|-----------------------------------------------------------|------------------------------------------------------------------------------------|
| <b>Hole Size in Sheet + 0.13</b>             | 8 mm                                                      |  |
| <b>L - Length ± 0.4</b>                      | 15 mm                                                     |                                                                                    |
| <b>H ± 0.25</b>                              | 15.3 mm                                                   |                                                                                    |
| <b>S Max.<sup>1</sup></b>                    | 3.3 mm                                                    |                                                                                    |
| <b>T Max.</b>                                | 2.13 mm                                                   |                                                                                    |
| <b>Max. Hole in Attached Parts</b>           | 10.3 mm                                                   |                                                                                    |
| <b>Min. Dist. Hole C/L to Edge</b>           | 14.5 mm                                                   |                                                                                    |
| <b>Tensile strength</b>                      | 900 MPa                                                   |                                                                                    |
| <b>For Use in Sheet Hardness<sup>2</sup></b> | HRB 96 / HB 216 or Less                                   |                                                                                    |
| <b>Thread Specification</b>                  | External, ASME B1.13M, 6g<br>B1.1, 2A / ASME              |                                                                                    |
| <b>Fastener Material</b>                     | Heat-Treated Alloy Steel                                  |                                                                                    |
| <b>Standard Finish</b>                       | Zinc plated per ASTM B633, SC1 (5µm), Type III, colorless |                                                                                    |
