## Acronyms in This Document

A list of acronyms used in this document.

Acronym	Definition
DDR	Double Data Rate
DIP	Dual In-line Package
FPGA	Field-Programmable Gate Array
JTAG	Joint Test Action Group
LVC MOS	Low Voltage Complementary Metal Oxide Semiconductor
SMA	Sub-Miniature A
RGMII	Reduced Gigabit Media-Independent Interface
SPI	Serial Peripheral Interface
USB	Universal Serial Bus

## 1. Introduction

The ECP5™ Versa Development Board allows designers to investigate and experiment with the features of the ECP5 Field-Programmable Gate Array. The features of the ECP5 Versa Development Board can assist engineers with rapid prototyping and testing of their specific designs. The ECP5 Versa Development Board is part of the ECP5 Versa Development Kit. The guide is intended to be referenced in conjunction with demo user guides to demonstrate the ECP5 FPGA.

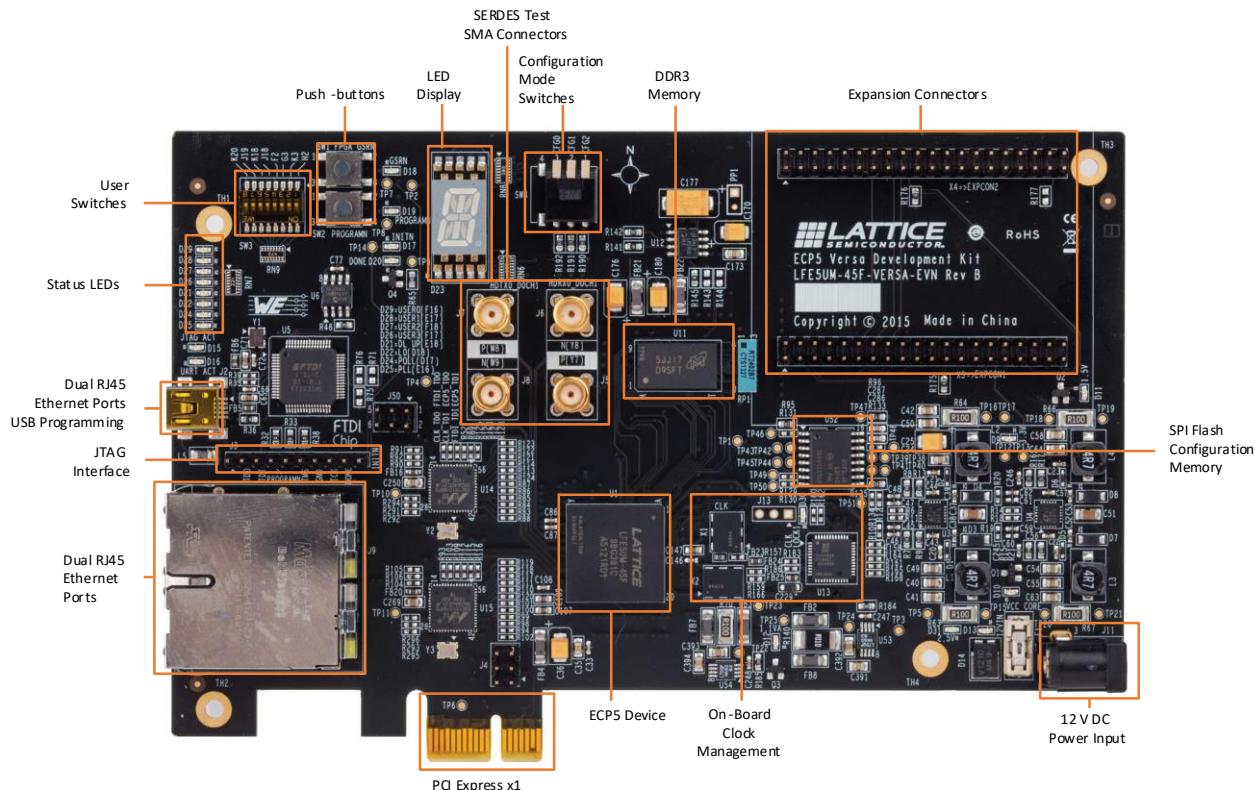

Figure 1.1. ECP5 Versa Development Board, Top Side

## 2. Features

- Half-length PCI Express form-factor
  - Allows demonstration of PCI Express x1 interconnection
- Electrical testing of one full-duplex SERDES channel through SMA connections
- USB-B connection for UART and device programming
- Two RJ45 interfaces to 10/100/1000 Ethernet to RGMII
- On-board Boot Flash
  - 128 M Serial SPI Flash
- DDR3-1866 memory components (64 Mb/x16)\*
- Expansion mezzanine interconnection for prototyping
- 14-segment alpha-numeric display
- Switches, LEDs and displays for demo purposes
- Diamond® programming support
- On-board reference clock sources

The contents of this user guide include top-level functional descriptions of the various portions of the evaluation board, descriptions of the on-board connectors, diodes and switches and a complete set of schematics.

**\*Note:** The ECP5 FPGA supports DDR3 memory at data rates up to 800 Mbps.

**Caution:** The ECP5 Versa Development Board contains ESD-sensitive components. ESD safe practices should be followed while handling and using the evaluation board.

## 3. ECP5 Device

This board features an ECP5 FPGA with a 1.1 V core supply. It can accommodate all pin-compatible ECP5 devices in the 381 ball caBGA package. A complete description of this device can be found in FPGA-DS-02012, ECP5 Family Data Sheet.

**Note:** The connections referenced in this document refer to the LFE5UM-45F-8BG381C device.

## 4. Applying Power to the Board

The ECP5 Versa Development Board is ready to power on. The board can be supplied with power from a PCI Express host system or standalone with an external wall power module.

The 12 V DC input power source is fused with a surface mounted fuse, as noted in Table 1.

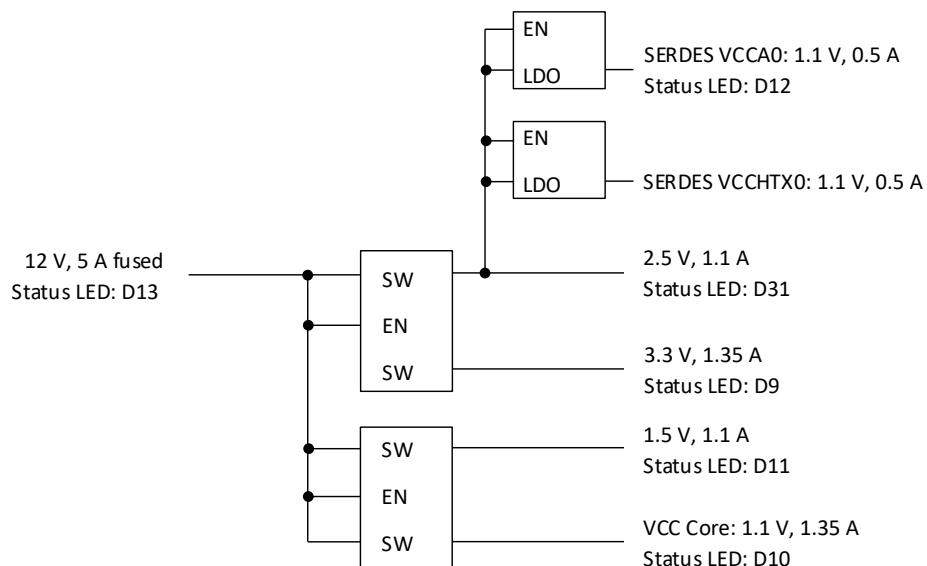

**Table 4.1. Board Power Supply Fuses**

Fuse Designator	Description
F1	12 V Input Supply Fuse

**Note:** See [Figure A.2](#).

The board may be plugged into a host PC. Only plug the board into a PCI Express slot when the system is powered off. Once inserted, the PC can be safely powered on.

Using the evaluation board outside of a PC chassis supply requires the factory-supplied wall supply module. Use of other supplies is not suggested.

**Figure 4.1. Power Distribution Scheme**

**Note:** See [Figure A.2](#)

## 5. Programming/FPGA Configuration

The ECP5 Versa Development Board has a built-in download controller for programming the ECP5 FPGA. The built-in module consists of a USB Type-B connector and a USB UART device. To use the built-in download cable, simply connect a standard USB cable (a USB-B to USB-A cable is included with the ECP5 Versa Development Kit) from J2 to your PC (with Diamond programming software installed). The USB hub on the PC will detect the addition of the USB function, making the built-in cable available for use with the Diamond programming software. The USB cable is connected in parallel to J3.

### 5.1. Alternate Programmer Download Interface

J3 is a 10 pin JTAG connector that is provided for use with an external Lattice download cable (available separately). A USB download cable can be attached to the board using J3 to interface with the FPGA (U1).

**Note:** Resistors R38, R33, R32 and R36 need to be removed for programming with J3.

The same interface can be used to access the ispClock 5406D clock device (U13) by reconfiguring the jumpers on J50. See [Figure A.3](#). U13 is factory-programmed for use with the reference designs and should only be altered for customized designs.

**Table 5.1. JTAG Connector Pinout (J3)**

Pin	Function
1	PWR
2	TDO
3	TDI
4	PROGRAMn
5	N/C
6	TMS
7	GND
8	TCK
9	DONE
10	INITn

**Note:** See [Figure A.3](#).

### 5.2. Diamond Programmer Requirements

Note: This board includes the built-in download module and only requires the USB cable included with the board. After initial board setup, use the following procedure to program the board. Instructions assume that Diamond Programmer software has been installed on a local PC.

Requirements:

- PC with Diamond Programmer 3.5.1 (or later) programming software, installed with appropriate drivers (USB driver for USB cable).

Note: An option to install these drivers is included as part of the Diamond Programmer setup.

## 6. Setting the Configuration Mode

The ECP5 device on the ECP5 Versa Development Board supports a variety of configuration modes, including 1149.1 JTAG and Master SPI. Refer to [ECP5 sysCONFIG Usage Guide \(FPGA-TN-02039\)](#). On the PCB version Rev B, use the CFG Setting Dip Switch SW4 described in [Table 6.1](#).

**Table 6.1. CFG[2:0] Selection – Rev B**

Configuration Mode	CFG[2:0]	SW4.3	SW4.2	SW4.1
1149.1 JTAG only	000	Down	Down	Down
Slave SPI	001	Down	Down	Up
Master SPI	010	Down	Up	Down
SCM (Slave_Serial)	101	Up	Down	Up
SCM (Slave_Parallel)	111	Up	Up	Up

### 6.1. Board Programming

#### 6.1.1. Configuration Status Indicators

See [Figure A.3](#).

**Figure 6.1. ECP5 Status LEDs and Push-button Controls**

The LEDs indicate the configuration status of the ECP5 FPGA.

- D17 (red) illuminated indicates that programming was aborted or reinitialized, driving the INITN output low.
- D20 (green) illuminated indicates the successful completion of configuration by releasing the open collector DONE output pin.
- D19 (red) illuminated indicates that PROGRAMN is low.
- D18 (red) illuminated indicates that GSRN is low.

### 6.2. PROGRAMN and GSRN

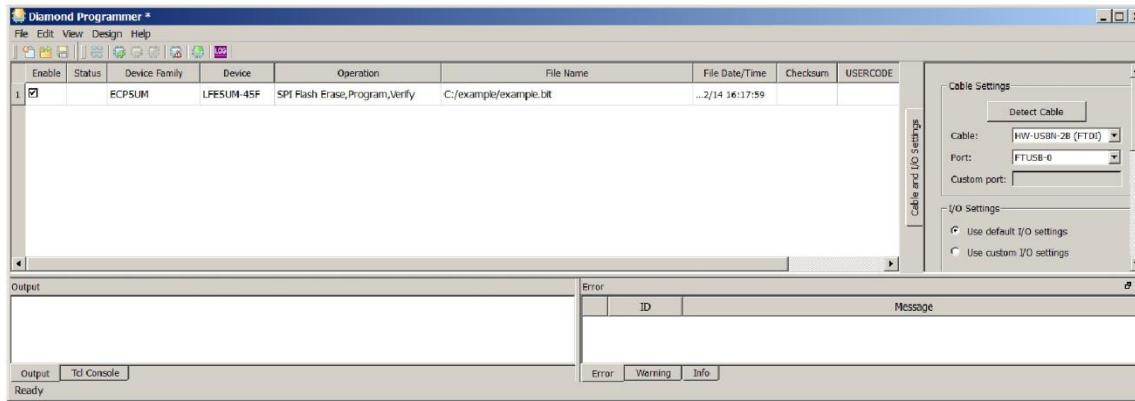

These push-button switches assert/de-assert the logic levels on PROGRAMN (SW2) and GSRN (SW1). De-pressing the button drives a logic level “0” to the device.

### 6.3. Programming Serial SPI Flash Memory

A serial SPI (16-pin TSSOP, 128M) Flash memory device (U52) is on-board for non-volatile configuration memory storage. A Micron N25Q128A device is populated on-board.

The Serial SPI Flash memory device can be configured easily through the ECP5 JTAG port. This mode enables the FPGA to be programmed at power-up or assertion of PROGRAMN with a bitstream stored in the memory device.

1. Connect the ECP5 Versa Development Board.
2. Scan the board or select the **LFE5UM-45F** device in the **ECP5UM** device family.
3. From the Edit pull down menu select Device Properties. Set the **Access mode to SPI Flash Background Programming and Operation to SPI Flash Erase, Program, Verify**.

**Figure 6.2. Diamond Programmer Main Screen**

4. Under the **SPI Flash Options**, select **Family to SPI Serial Flash**, **Vendor to Micron**, **Device to SPI-N25Q128A**, **Package to 16-pin SO16**.

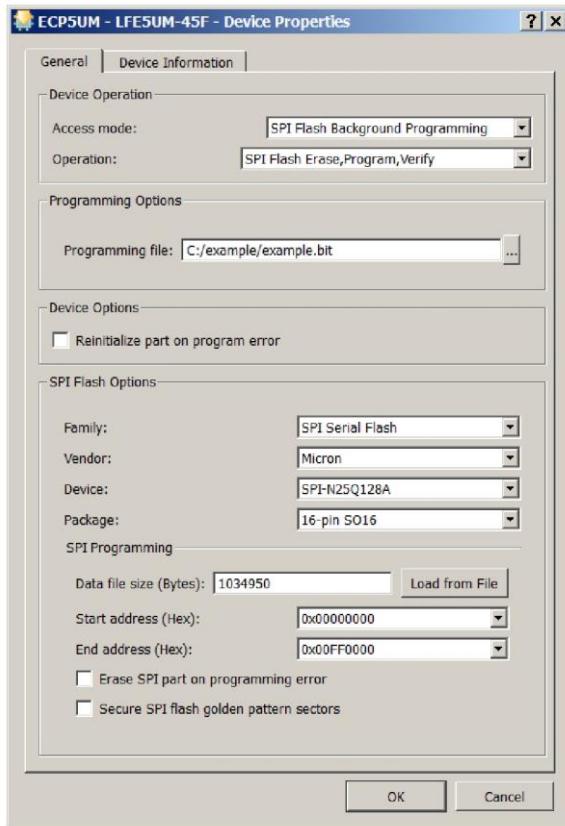

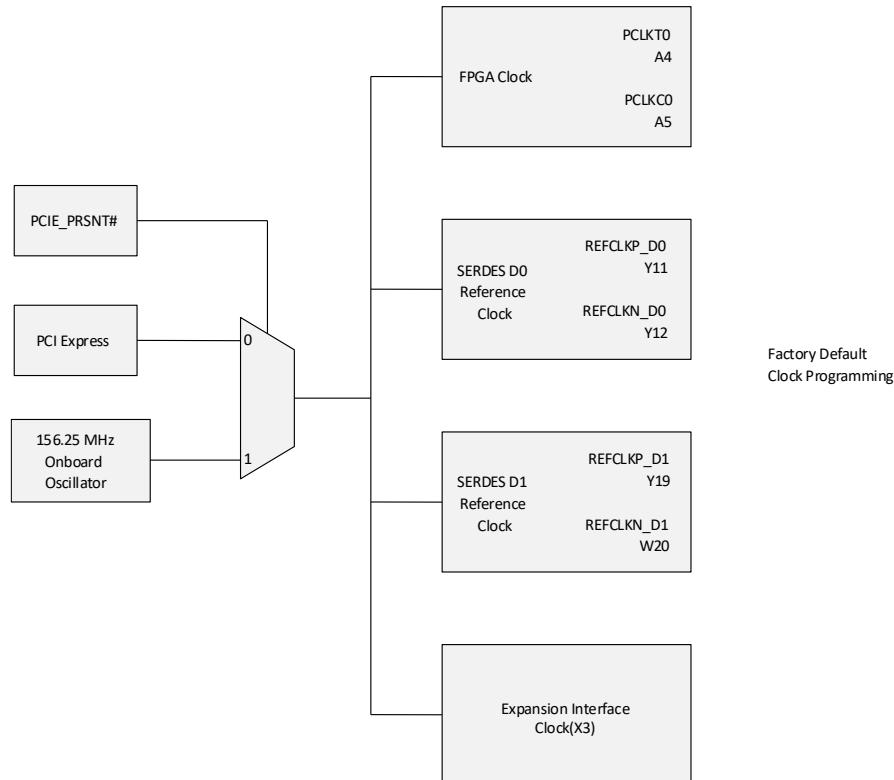

Figure 6.3. Device Properties Dialog Box

5. Click **OK** in the **Device Properties** dialog box. You will return to the main configuration screen.
6. Set J50 jumper to ECP5 programming. See [Figure A.3](#).
7. Ensure the **Configuration Mode** is set to Master SPI using DIP Switch SW4. See [Table 6.1](#).
8. From the main programming window, select **Program** from the top toolbar. This begins the SPI Serial Flash programming. Note that the SPI Flash Background Programming operation is only possible when the ECP5 device is either erased or the active design has the **MASTER\_SPI\_PORT** mode enabled. For more details see [ECP5 sysCONFIG Usage Guide \(FPGA-TN-02039\)](#).

## 7. On-Board Clock Capabilities

See [Figure A.9](#).

The ECP5 Versa Development Board allows for several clock source options. Some of these options are controlled through the ispClock5406D programmable clock manager device. The ispClock5406D enables the reference clock from the PCI Express interface to provide a reference clock to the SERDES. This is true only when the board is in a PCI Express host socket. When the board is not in a PCI Express host socket, the clock will be supplied by a 156.25 MHz clock on-board oscillator. Both clock inputs can be fanned out to the dedicated SERDES reference inputs, FPGA inputs, and to the expansion connectors. The factory default programming only connects the SERDES reference clock inputs. Factory-defined demonstration designs will control and manage the clock.

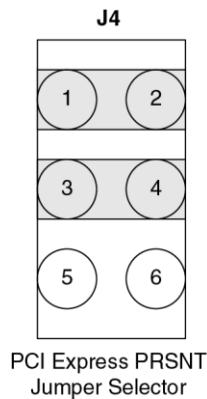

**Figure 7.1. Clock Controller Scheme**

## 7.1. General Purpose Clock Source

An on-board 100 MHz LVDS oscillator is provided for general purpose use. This clock source is connected to differential inputs P3 and P4 and must be used as LVDS inputs to the FPGA. This pin pair also provides optimal interface to the FPGA PLL for customized use.

The PCI Express add-in card specification requires add-in boards to include capabilities to tell the host of its presence. The ECP5 Versa Development Board allows this optional connection through a board jumper. Using the board with a PCI Express host requires the setting shown in [Figure 7.2](#).

**Figure 7.2. PCI Express PRSNT Control Connection**

## 7.2. SERDES

The ECP5 Dual Channel Unit (DCU) SERDES FPGA is utilized on the board for several purposes. DCU0, Channel 0 is provisioned to provide a single, full-duplex PCI Express channel. The high-speed signals are connected to the PCI Express edge connection. DCU0, Channel 1 is connected to the SMA connectors for external electrical demonstrations.

**Table 7.1. PCI Express Channel Interconnections**

Signal Name	SERDES Port	FPGA Ball Number
PETp0	HDRXPO_DOCH0	Y5
PETn0	HDRXNO_DOCH0	Y6
PERp0	HDTXPO_DOCH0	W4
PERn0	HDTXNO_DOCH0	W5

**Table 7.2. SMA Test Interconnections**

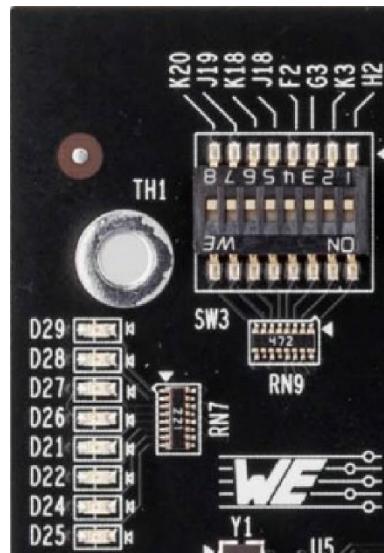

Connector	SERDES Port	FPGA Ball Number
J5	HDRXPO_DOCH1	Y7
J6	HDRXNO_DOCH1	Y8
J7	HDTXPO_DOCH1	W8
J8	HDTXNO_DOCH1	W9

## 8. FPGA Test Pins

See [Figure A.8](#).

### 8.1. General Purpose DIP Switches

General purpose FPGA pins are available for user applications. FPGA pins are connected to switch SW3, a SPST slide-actuated DIP switch. The switches are connected to logic level 0 when moved to the ON position. Switch position 1 is indicated with an arrow. Inputs 1-4 are within a 1.5 V bank and inputs 5-8 are within a 2.5 V bank. The user must program inputs 1-4 to be the LVCMS15 type and inputs 5-8 to be the LVCMS25 type in the design. [Figure 8.1](#) shows the switches. Note the silk marking associated with SW3-7 is incorrect in revision B, SW3-7 is mapped to K19, per [Table 8.1](#).

**Figure 8.1.** ECP5 Versa Development Board LEDs and Switches

The designated pins are connected according to [Table 8.1](#).

**Table 8.1. FPGA Ball to DIP Switch Position**

FPGA Ball Number	SW3 DIP Switch Position
H2	1
K3	2
G3	3
F2	4
J18	5
K18	6
K19	7
K20	8

## 8.2. General Purpose LEDs

See [Figure A.8](#).

The LEDs provided on the ECP5 Versa Development Board are connected to general purpose FPGA I/O. These LEDs provide status for user designs and must be included in the design. The LEDs illuminate when the FPGA output is driven LOW. [Table 8.2](#) shows the LED and associated FPGA pins. These pins are within an I/O bank connected to 2.5 V and the user should program these to be LVCMS25 type outputs in the design.

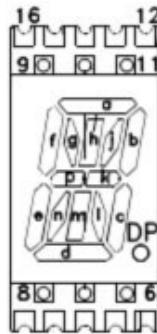

**Table 8.2. LED Definitions**

LED Designator	FPGA Ball Number	LED Color
D25	E16	Yellow
D24	D17	Yellow
D22	D18	Green
D21	E18	Green
D26	F17	Red
D27	F18	Red
D28	E17	Red
D29	F16	Red

## 8.3. Alpha-numeric LED Display

See [Figure A.8](#).

A 14-segment alpha-numeric display is provided on the board (D23). These LED segments are connected to general-purpose FPGA I/O. The LEDs must be included in the FPGA design. The LEDs illuminate when the FPGA output is driven LOW. [Table 8.3](#) shows the LED and associated FPGA pins. These pins are within an I/O bank connected to 2.5 V and the user should program these to be LVCMS25 outputs in the design.

**Figure 8.2. 14-Segment Display**

**Table 8.3. Alpha-numeric LED Definitions**

Display	FPGA Ball Number	Display	FPGA Ball Number

D	L16	M	P16
E	L17	N	R16
F	M18	P	R17
G	N16	DP	U1
H	M17		

## 8.4. DDR3 Memory Device

See [Figure A.7](#).

- The ECP5 Versa Development Board is equipped with an SDRAM memory device (1.5 V, 64 Mb/x16, 96-ball FBGA, 933 MHz, DDR3-1866) such as the Micron MT41K64M16TW-107:J device.
- The DDR3 memory includes a 16-bit wide memory controller interface.
- The board includes termination of data, address and command signals. It includes all power and external components needed to demonstrate the memory controller of the ECP5 device.
- A 100 MHz on-board clock oscillator is available to provide a DDR3 reference clock.

## 8.5. Ethernet Interfaces

See [Figure A.5](#) and [Figure A.6](#).

Two Marvell 88E1512 Gigabit Ethernet transceiver devices (U14 and U15) are included on the board. These physical layer devices support 1000BASE-T, 100BASE-TX, and 10BASE-T applications through a standard media interface to a dual RJ45 connection. The RJ45 connection includes network magnetics providing the proper signal conditioning, electro-magnetic interference suppression and signal isolation. Each connector includes two LEDs which are controlled by the 88E1512 devices. Detailed descriptions are available in the Marvell device data sheet.

**Table 8.5. PHY Status Indicators**

LED	Status Description
RJ45 (Yellow)	Data RX/TX
RJ45 (Green/Orange)	Link State

Each Marvell 88E1512 device communicates through an RGMII interface to the ECP5 device.

## Appendix C. Demo Board Rev A Information

### ECP5 Versa Development Board – Working with Revision A

This document covers the Revision B of ECP5 Versa. To work with Revision A there are several items to be aware of:

#### Setting the Configuration Mode

On the Rev A, setting the Configuration Mode requires modifying the resistor population in the CFG[2:0] Setting Resistor Field (see [Figure C.1](#)) as described in [Table 6.1](#). This requires adding and/or removing 0603 size SMT resistors as necessary. Some soldering skill and the correct equipment is necessary to perform this rework.

**Figure C.1. CFG[2:0] Setting Resistor Field – Revision A**

**Table C.1. CFG[2:0] Selection – Revision A**

Configuration Mode	CFG[2:0]	Rev A					
		R190 (1K–4.7 kΩ)	R191 (1K–4.7 kΩ)	R192 (1K–4.7 kΩ)	R182 (0–1 kΩ)	R188 (0–1 kΩ)	R189 (0–1 kΩ)
1149.1 JTAG only	000	removed	removed	removed	placed	placed	placed
Slave SPI	001	removed	removed	placed	placed	placed	removed
Master SPI	010	removed	placed	removed	placed	removed	placed
SCM (Slave_Serial)	101	placed	removed	placed	removed	placed	removed
SCM (Slave_Parallel)	111	placed	placed	placed	removed	removed	removed

**Note:** Removing all six resistors is equivalent to Slave Parallel mode due to internal weak Pull-up resistors on CFG[2:0] pins.

#### ECP5 Pin Assignment Changes

The following pins ([Table C.2](#)) have changed assignment between the Rev A and Rev B board. These functions would need to be remapped for use between the two boards.

**Table C.2. Pin Assignment Updates – Rev A versus Rev B**

Pin Signal / Function	Rev A ECP5 Ball Location	Rev B ECP5 Ball Location
SEG1 (Character LED)	L19	L18
Switch 3-7	J19	K19
Phy1_CLK125 (Ethernet Phy 1)	L18	L19
Phy2_RxCLK (Ethernet Phy 2)	K19	J19

## Revision History

### Revision 2.4, November 2021

Section	Change Summary
All	Updated document template.
Disclaimers	Added this section.
Acronyms in This Document	Added this section.
Appendix A. ECP5 Versa Development Board Schematics	Rotated J50 jumper setting graphics in <a href="#">Figure A.3. Programming</a> .

### Revision 2.3, September 2018

Section	Change Summary
All	<ul style="list-style-type: none"><li>Updated document number from EB98 to FPGA-EB-02021.</li><li>Updated ECP5 and ECP5-5G Family Data Sheet number to FPGA-DS-02012.</li><li>Updated PCI Express Demos for the ECP5 and ECP5-5G Versa Development Board number to FPGA-UG-02006.</li></ul>

### Revision 2.2, March 2017

Section	Change Summary
Features	Added note to the “DDR3-1866 memory components (64Mb/x16)” feature.
Updated Programming Serial SPI Flash Memory	Added step 7 to the procedure.

### Revision 2.1, November 2015

Section	Change Summary
Introduction	Indicated Dual RJ45 Ethernet ports and corrected USB Programming callout in Figure 1, ECP5 Versa Development Board, Top Side.
General Purpose LEDs	Revised FPGA ball numbers in Table 7, LED Definitions.
Appendix A. ECP5 Versa Development Board Schematics	Revised LEDs signal map in Figure 17, LEDs and Switches.
Appendix B. ECP5 Versa Development Board Bill of Materials	Revised description of item 111.
Appendix C.	Updated Setting the Configuration Mode. Changed Figure 20, CFG[2:0] Setting Resistor Field – Revision A. Demo Board Rev A Information.

### Revision 2.0, August 2015

Section	Change Summary
All	Updated to support Rev B of development board.

**Revision 1.1, July 2015**

Section	Change Summary
Setting the Configuration Mode	Added this section.
Technical Support Assistance	Updated technical support information.
Appendix B. ECP5 Versa Development Board Bill of Materials	Added this section.

**Revision 1.0, March 2015**

Section	Change Summary
All	Initial release.
