

# SN74CBT16214 12-Bit 1-of-3 FET Multiplexer/Demultiplexer

## 1 Features

- Member of the Texas Instruments Widebus™ Family
- 5-Ω Switch Connection Between Two Ports
- TTL-Compatible Input Levels

## 2 Applications

- Analog and Digital Multiplexing and Demultiplexing
- A/D and D/A Conversion
- Factory Automation
- Consumer Audio
- Programmable Logic Circuits
- Sensors

## 3 Description

The SN74CBT16214 provides 12 bits of high-speed TTL-compatible bus switching between three separate ports. The low ON-state resistance of the switch allows connections to be made with minimal propagation delay.

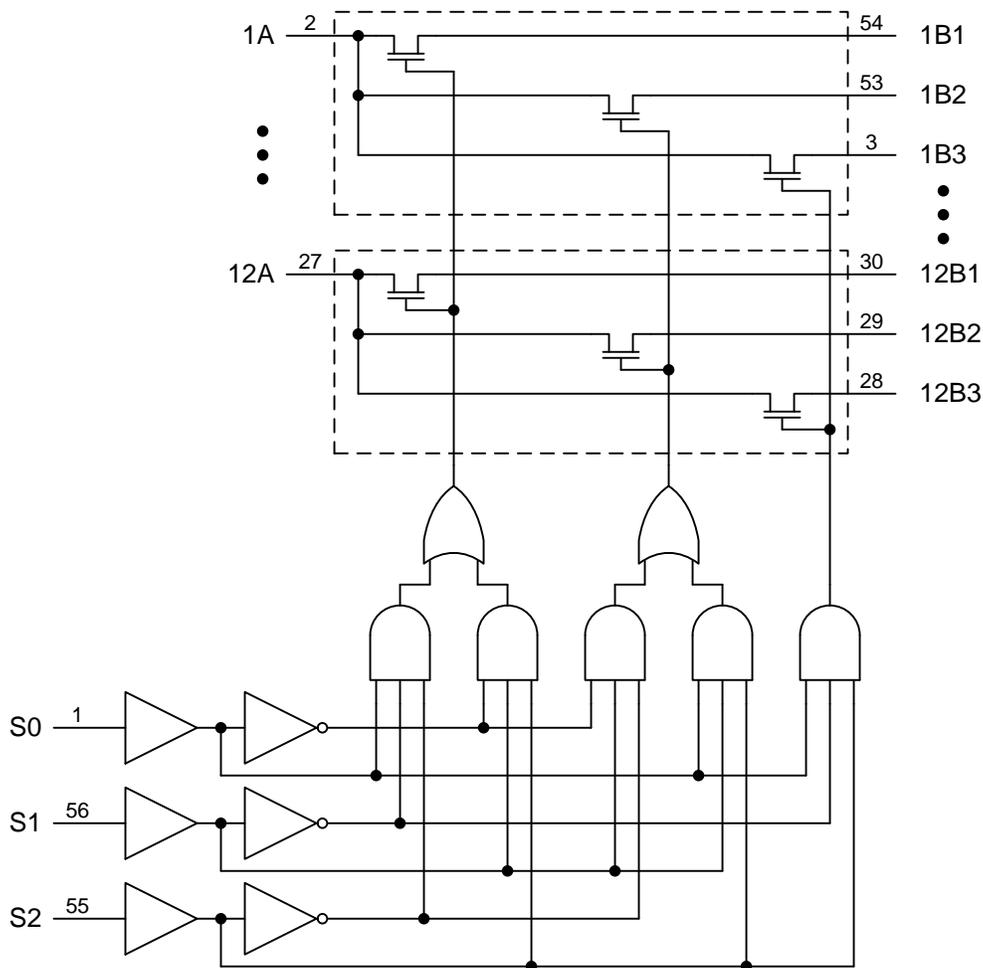

The device operates as a 12-bit bus-select switch via the data-select (S0–S2) terminals.

### Device Information<sup>(1)</sup>

| PART NUMBER     | PACKAGE    | BODY SIZE (NOM)     |
|-----------------|------------|---------------------|
| SN74CBT16214DGG | TSSOP (56) | 8.10 mm x 14.00 mm  |
| SN74CBT16214DL  | SSOP (56)  | 10.35 mm x 18.42 mm |

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

|   | MIN  | MAX | UNIT |
|---|------|-----|------|
| V <sub>CC</sub> Supply voltage                            | -0.5 | 7   | V    |
| V <sub>I</sub> Input voltage <sup>(2)</sup>               | -0.5 | 7   | V    |
| Continuous channel current                                |      | 128 | mA   |
| I <sub>IK</sub> Input clamp current, (V <sub>I</sub> < 0) |      | 50  | mA   |
| T <sub>stg</sub> Storage temperature                      | -65  | 150 | °C   |

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

### 6.2 ESD Ratings

|  | VALUE  | UNIT  |
|--|--|-------|
| V <sub>(ESD)</sub> Electrostatic discharge | Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>              | ±1000 |
|  | Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup> | ±1500 |

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

|  | MIN | MAX | UNIT |
|--|-----|-----|------|
| V <sub>CC</sub> Supply voltage                   | 4   | 5.5 | V    |
| V <sub>IH</sub> High-level control input voltage | 2   |     | V    |
| V <sub>IL</sub> Low-level control input voltage  |     | 0.8 | V    |
| T <sub>A</sub> Operating free-air temperature    | -40 | 85  | °C   |

- (1) All unused control inputs of the device must be held at V<sub>CC</sub> or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, [SCBA004](#).

## 6.4 Thermal Information

| THERMAL METRIC <sup>(1)</sup>                           | SN74CBT16214 |           | UNIT |
|---|--------------|-----------|------|
|   | DGG (TSSOP)  | DL (SSOP) |      |
|   | 56 PINS      | 56 PINS   |      |
| R <sub>θJA</sub> Junction-to-ambient thermal resistance | 64           | 56        | °C/W |

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

## 6.5 Electrical Characteristics

over recommended operating free-air temperature range (unless otherwise noted)

| PARAMETER                       | TEST CONDITIONS   | MIN  | TYP <sup>(1)</sup> | MAX  | UNIT |
|---------------------------------|---|--|--------------------|------|------|
| V <sub>IK</sub>                 | V <sub>CC</sub> = 4.5 V, I <sub>I</sub> = -18 mA  |  |                    | -1.2 | V    |
| I <sub>I</sub>                  | V <sub>CC</sub> = 0, V <sub>I</sub> = 5.5 V   |  |                    | 10   | μA   |
|                                 | V <sub>CC</sub> = 5.5 V, V <sub>I</sub> = 5.5 V or GND  |  |                    | ±1   |      |
| I <sub>CC</sub>                 | V <sub>CC</sub> = 5.5 V, I <sub>O</sub> = 0, V <sub>I</sub> = V <sub>CC</sub> or GND                  |  |                    | 3    | μA   |
| ΔI <sub>CC</sub> <sup>(2)</sup> | Control inputs<br>V <sub>CC</sub> = 5.5 V, One input at 3.4 V, Other inputs at V <sub>CC</sub> or GND |  |                    | 2.5  | mA   |
| C <sub>i</sub>                  |   | V <sub>I</sub> = 3 V or 0                      |                    | 4    |      |
| C <sub>IO(OFF)</sub>            | V <sub>O</sub> = 3 V or 0, S <sub>0</sub> , S <sub>1</sub> , and S <sub>2</sub> = GND                 |  | 7.5                |      | pF   |
| r <sub>on</sub> <sup>(3)</sup>  | V <sub>CC</sub> = 4 V, TYP at V <sub>CC</sub> = 4 V   | V <sub>I</sub> = 2.4 V, I <sub>I</sub> = 15 mA | 14                 | 20   | Ω    |
|                                 | V <sub>CC</sub> = 4.5 V   | V <sub>I</sub> = 0                             | 4                  | 7    |      |
|                                 |   | I <sub>I</sub> = 30 mA                         | 4                  | 7    |      |
|                                 |   | V <sub>I</sub> = 2.4 V, I <sub>I</sub> = 15 mA | 6                  | 12   |      |

(1) All typical values are at V<sub>CC</sub> = 5 V (unless otherwise noted), T<sub>A</sub> = 25°C.

(2) This is the increase in supply current for each input that is at the specified TTL voltage level rather than V<sub>CC</sub> or GND.

(3) Measured by the voltage drop between the A and B terminals at the indicated current through the switch. ON-state resistance is determined by the lower of the voltages of the two (A or B) terminals.

## 6.6 Switching Characteristics

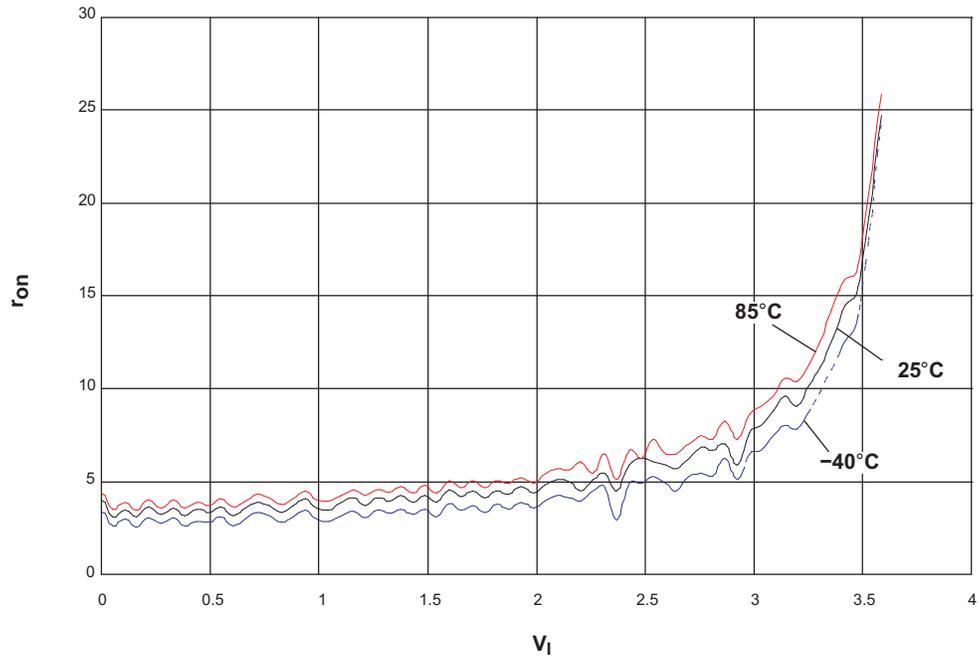

over recommended operating free-air temperature range, C<sub>L</sub> = 50 pF (unless otherwise noted) (see [Figure 2](#))

| PARAMETER                      | FROM (INPUT) | TO (OUTPUT) | V <sub>CC</sub> = 4 V |      | V <sub>CC</sub> = 5 V ± 0.5 V |      | UNIT |
|--------------------------------|--------------|-------------|-----------------------|------|-------------------------------|------|------|
|                                |              |             | MIN                   | MAX  | MIN                           | MAX  |      |
| t <sub>pd</sub> <sup>(1)</sup> | A or B       | B or A      |                       | 0.35 |                               | 0.25 | ns   |
| t <sub>pd</sub>                | S            | B or A      |                       | 15.3 | 5.5                           | 13.9 | ns   |
| t <sub>en</sub>                | S            | A or B      |                       | 16   | 5.1                           | 14.5 | ns   |
| t <sub>dis</sub>               | S            | A or B      |                       | 12.1 | 3.6                           | 11.7 | ns   |

(1) The propagation delay is the calculated RC time constant of the typical ON-state resistance of the switch and the specified load capacitance, when driven by an ideal voltage source (zero output impedance).

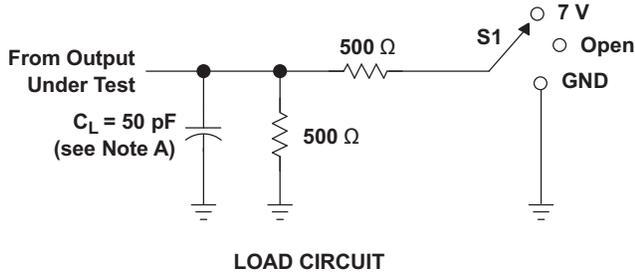

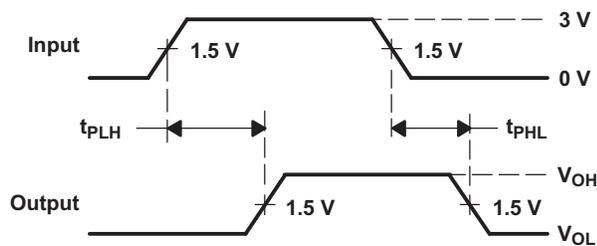

### 6.7 Typical Characteristics

over operating free-air temperature range (unless otherwise noted)

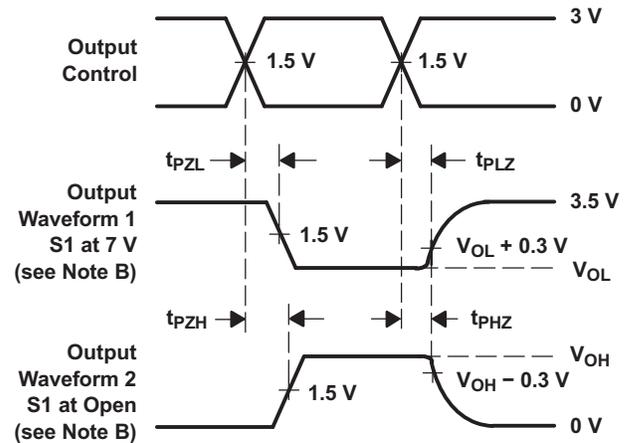

**Figure 1.  $r_{ON}$  vs.  $V_I$ ,  $V_{CC} = 5$  V**

## 7 Parameter Measurement Information

**LOAD CIRCUIT**

**VOLTAGE WAVEFORMS  
PROPAGATION DELAY TIMES**

| TEST              | S1   |
|-------------------|------|
| $t_{pd}$          | Open |
| $t_{PLZ}/t_{PZL}$ | 7 V  |
| $t_{PHZ}/t_{PZH}$ | Open |

**VOLTAGE WAVEFORMS  
ENABLE AND DISABLE TIMES**

- NOTES:
- $C_L$  includes probe and jig capacitance.
  - Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
  - All input pulses are supplied by generators having the following characteristics:  $PRR \leq 10 \text{ MHz}$ ,  $Z_O = 50 \Omega$ ,  $t_r \leq 2.5 \text{ ns}$ ,  $t_f \leq 2.5 \text{ ns}$ .
  - The outputs are measured one at a time with one transition per measurement.
  - $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$ .
  - $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$ .
  - $t_{PLH}$  and  $t_{PHL}$  are the same as  $t_{pd}$ .

**Figure 2. Load Circuit and Voltage Waveforms**

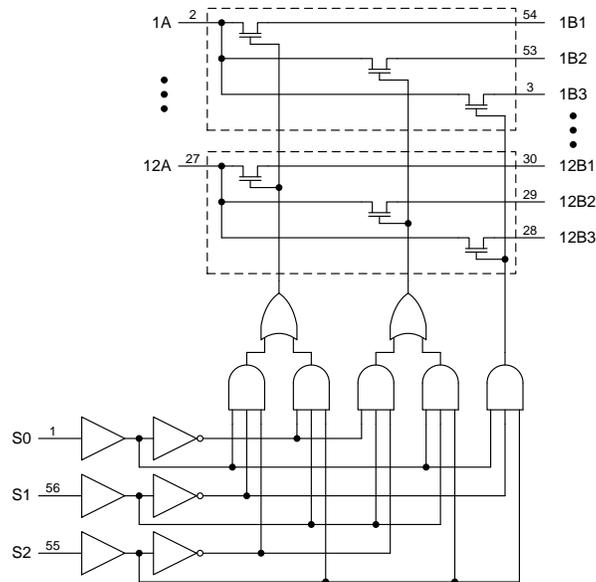

## 8 Detailed Description

### 8.1 Overview

The SN74CBT16214 provides 12 bits of high-speed TTL-compatible bus switching between three separate ports. The low ON-state resistance of the switch allows connections to be made with minimal propagation delay.

The device operates as a 12-bit bus-select switch via the data-select (S0–S2) terminals.

### 8.2 Functional Block Diagram

### 8.3 Feature Description

The typical  $R_{ON}$  for each port is 5  $\Omega$ , reducing the amount of signal attenuation through the switch from higher impedance switches. Inputs operate with TTL-compatible voltages.

### 8.4 Device Functional Modes

Table 1 lists the functional modes for SN74CBT16214.

Table 1. Function Table

| INPUTS |    |    | INPUT/OUTPUT<br>A | FUNCTION         |
|--------|----|----|-------------------|------------------|
| S2     | S1 | S0 |                   |                  |
| L      | L  | L  | Z                 | Disconnect       |
| L      | L  | H  | B1                | A port = B1 port |
| L      | H  | L  | B2                | A port = B2 port |
| L      | H  | H  | Z                 | Disconnect       |
| H      | L  | L  | Z                 | Disconnect       |
| H      | L  | H  | B3                | A port = B3 port |
| H      | H  | L  | B1                | A port = B1 port |
| H      | H  | H  | B2                | A port = B2 port |

## 9 Application and Implementation

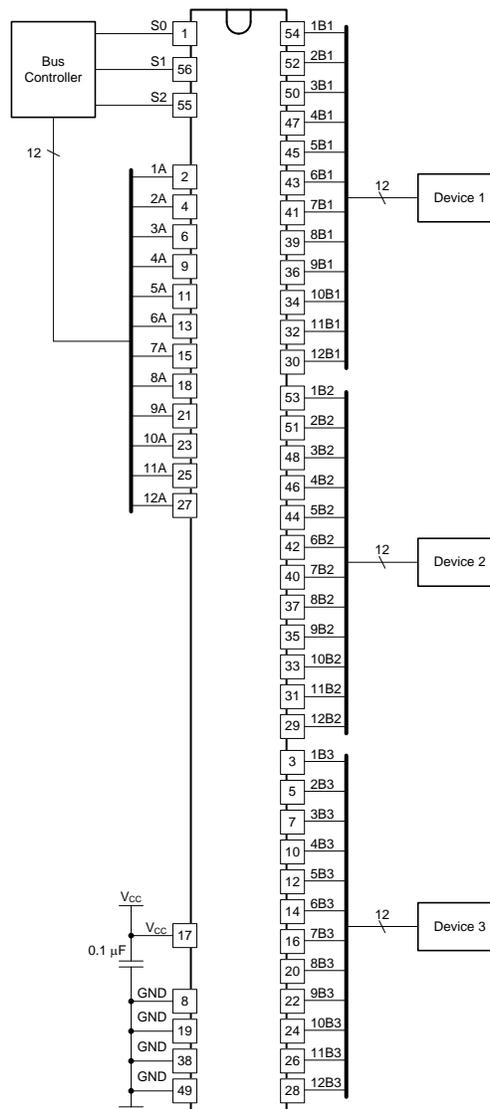

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

The SN74CBT16214 is typically used to expand a single 12-bit bus to three separate 12-bit busses. Fewer bits can be used as well if the unused inputs are tied to either ground or  $V_{CC}$ .

### 9.2 Typical Application

**Figure 3. Typical Application Simplified Schematic**

#### 9.2.1 Design Requirements

The 0.1- $\mu$ F capacitor should be placed as close as possible to the  $V_{CC}$  pin of the device.

## Typical Application (continued)

### 9.2.2 Detailed Design Procedure

1. Recommended Input Conditions
  - For switch time specifications, see propagation delay times in [Switching Characteristics](#).
  - Inputs should remain between 0.5 V and 7 V, regardless of  $V_{CC}$ .
  - For input voltage level specifications for control inputs, see  $V_{IH}$  and  $V_{IL}$  in [Recommended Operating Conditions](#).
2. Input/output current consideration: The SN74CBT16214 does not have internal current drive circuitry and thus cannot sink or source current. Any current will be passed through the device.

### 9.2.3 Application Curve

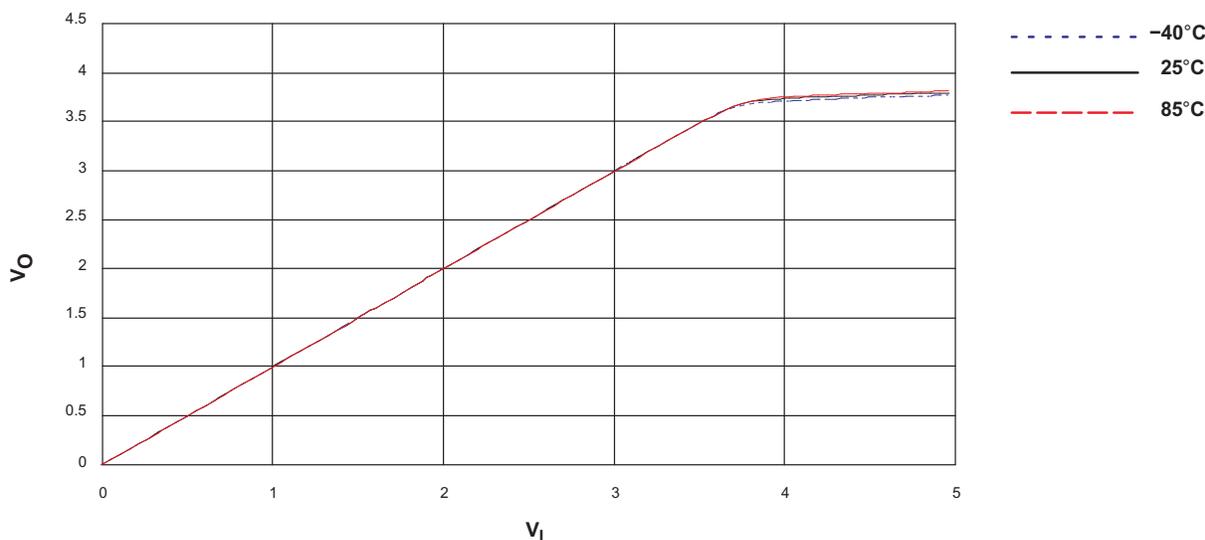

Figure 4.  $V_O$  vs  $V_I$ ,  $V_{CC} = 5$  V

## 10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the [Electrical Characteristics](#).

Each  $V_{CC}$  terminal should have a good bypass capacitor to prevent power disturbance. For devices with a single-supply, a 0.1- $\mu$ F bypass capacitor is recommended. If there are multiple pins labeled  $V_{CC}$ , then a 0.01- $\mu$ F or 0.022- $\mu$ F capacitor is recommended for each  $V_{CC}$  because the  $V_{CC}$  pins will be tied together internally. For devices with dual-supply pins operating at different voltages, for example  $V_{CC}$  and  $V_{DD}$ , a 0.1- $\mu$ F bypass capacitor is recommended for each supply pin. It is acceptable to parallel multiple bypass capacitors to reject different frequencies of noise. 0.1- $\mu$ F and 1- $\mu$ F capacitors are commonly used in parallel. The bypass capacitor should be installed as close to the power terminal as possible for best results.

## 11 Layout

### 11.1 Layout Guidelines

Reflections and matching are closely related to loop antenna theory, but different enough to warrant their own discussion. When a PCB trace turns a corner at a 90° angle, a reflection can occur. This is primarily due to the change of width of the trace. At the apex of the turn, the trace width is increased to 1.414 times its width. This upsets the transmission line characteristics, especially the distributed capacitance and self-inductance of the trace — resulting in the reflection. It is a given that not all PCB traces can be straight, and so they will have to turn corners. [Figure 5](#) shows progressively better techniques of rounding corners. Only the last example maintains constant trace width and minimizes reflections.

## 11.2 Layout Example

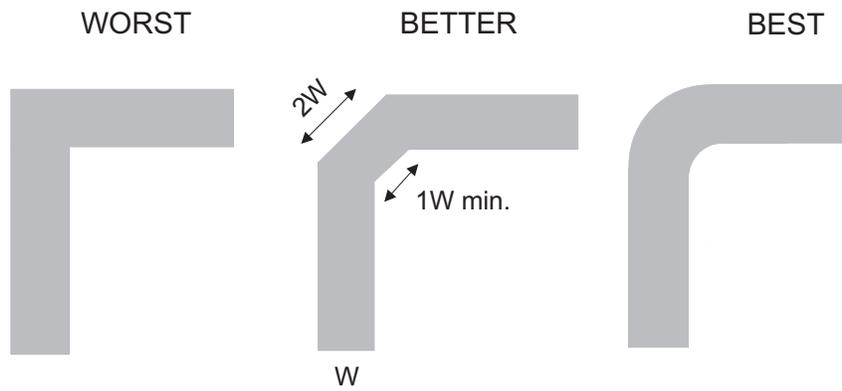

Figure 5. Trace Example

## 12 Device and Documentation Support

### 12.1 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

**TI E2E™ Online Community** *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At [e2e.ti.com](http://e2e.ti.com), you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

**Design Support** *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

### 12.2 Trademarks

E2E is a trademark of Texas Instruments.  
All other trademarks are the property of their respective owners.

### 12.3 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

### 12.4 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

## 13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

**PACKAGING INFORMATION**

| Orderable Device | Status<br>(1) | Package Type | Package Drawing | Pins | Package Qty | Eco Plan<br>(2)         | Lead/Ball Finish<br>(6) | MSL Peak Temp<br>(3) | Op Temp (°C) | Device Marking<br>(4/5) | Samples                 |
|------------------|---------------|--------------|-----------------|------|-------------|-------------------------|-------------------------|----------------------|--------------|-------------------------|-------------------------|

| SN74CBT16214DLR  | ACTIVE        | SSOP         | DL              | 56   | 1000        | Green (RoHS & no Sb/Br) | CU NIPDAU               | Level-1-260C-UNLIM   | -40 to 85    | CBT16214                | <a href="#">Samples</a> |

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

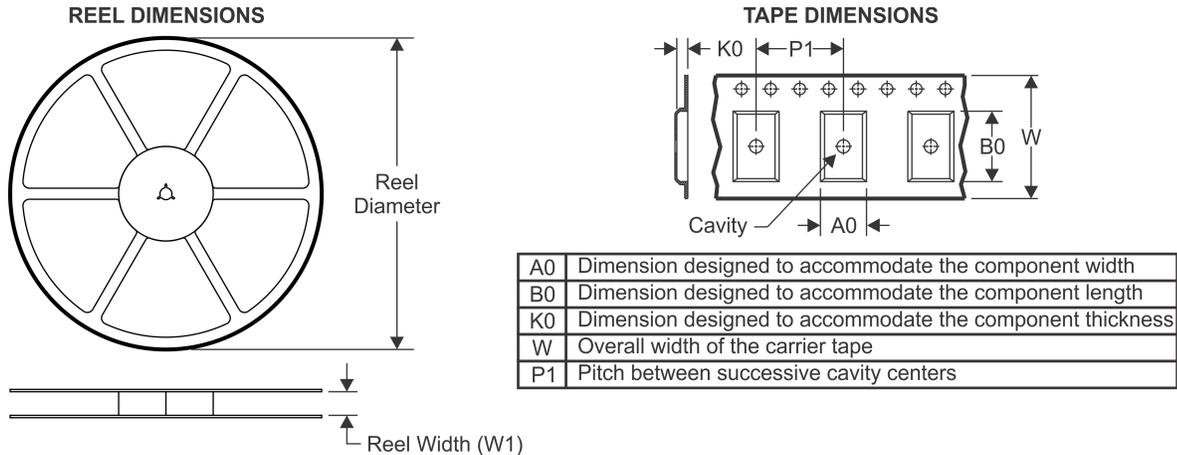

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## TAPE AND REEL INFORMATION

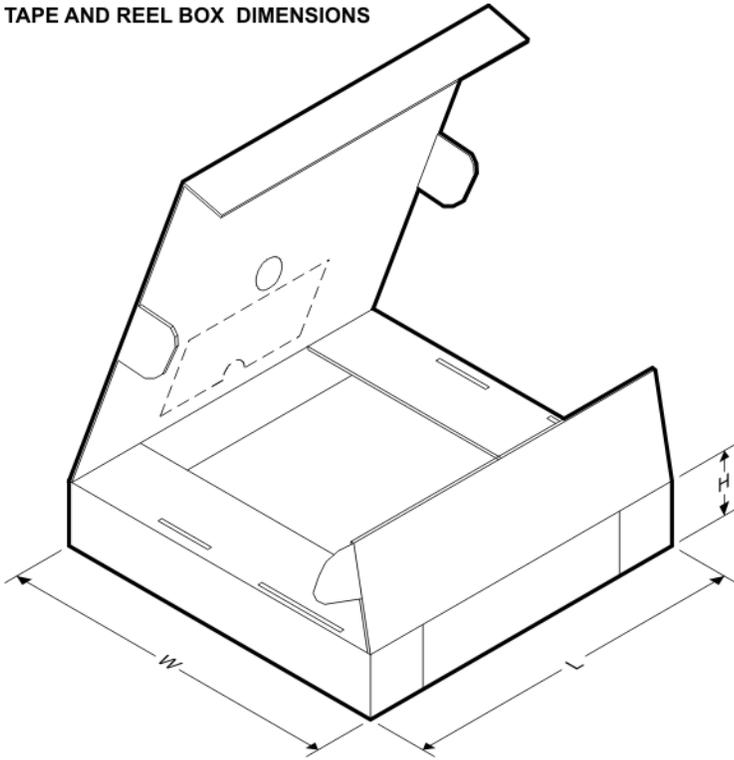

### QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE

\*All dimensions are nominal

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
