

SN74LV4052A-Q1 Dual 4-Channel Analog Multiplexers and Demultiplexers

1 Features

- Qualified for Automotive Applications
- AEC-Q100 Qualified With the Following Results:
 - Device Temperature Grade 1: –40°C to +125°C Ambient Operating Temperature Range
 - Device HBM ESD Classification Level 2
 - Device CDM ESD Classification Level C4B
- Supports Mixed-Mode Voltage Operation on All Ports
- Fast Switching
- High On-Off Output-Voltage Ratio
- Low Crosstalk Between Switches
- Extremely Low Input Current

2 Applications

- Automotive:
 - Signal Gating
 - Chopping
 - Modulation or Demodulation (Modem)
 - Signal Multiplexing for Analog-to-Digital and Digital-to-Analog Conversion Systems

3 Description

These dual 4-channel CMOS analog multiplexers and demultiplexers are designed for 2-V to 5.5-V V_{CC} operation.

The SN74LV4052A-Q1 devices handle both analog and digital signals. Each channel permits signals with amplitudes up to 5.5 V (peak).

Applications include signal gating, chopping, modulation or demodulation (modem), and signal multiplexing for analog-to-digital and digital-to-analog conversion systems.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
SN74LV4052A-Q1	TSSOP (16)	5.00 mm x 4.40 mm
	SOIC (16)	9.90 mm x 3.91 mm

(1) For all available packages, see the orderable addendum at the end of the datasheet.

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision E (November 2012) to Revision F	Page
<ul style="list-style-type: none"> • Added <i>ESD Ratings</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i>, <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section 4 	4

Changes from Revision D (June 2011) to Revision E	Page
<ul style="list-style-type: none"> • Deleted θ_{JA} row from Absolute Maximum Ratings table 4 • Added Thermal Information table 5 • Corrected second row of Function Table 11 	11

5 Pin Configuration and Functions

Pin Functions

PIN		I/O ⁽¹⁾	DESCRIPTION
NO.	NAME		
1	2Y0	I ⁽¹⁾	Input to mux 2
2	2Y2	I ⁽¹⁾	Input to mux 2
3	2-COM	O ⁽¹⁾	Output of mux 2
4	2Y3	I ⁽¹⁾	Input to mux 2
5	2Y1	I ⁽¹⁾	Input to mux 2
6	INH	I	Enables the outputs of the device. Logic low level will turn the outputs on, high level will turn them off.
7	GND	-	Ground
8	GND	-	Ground
9	B	I	Selector line for outputs (see Device Functional Modes for specific information)
10	A	I	Selector line for outputs (see Device Functional Modes for specific information)
11	1Y3	I ⁽¹⁾	Input to mux 1
12	1Y0	I ⁽¹⁾	Input to mux 1
13	1-COM	O ⁽¹⁾	Output of mux 1
14	1Y1	I ⁽¹⁾	Input to mux 1
15	1Y2	I ⁽¹⁾	Input to mux 1
16	Vcc	I	Device power input

- (1) These I/O descriptions represent the device when used as a multiplexer, when this device is operated as a demultiplexer pins 1Y0, 1Y1, 1Y2, 1Y3, 2Y0, 2Y1, 2Y2, 2Y3 may be considered outputs (O) and pins 1-COM and 2-COM may be considered inputs (I).

6 Specifications

6.1 Absolute Maximum Ratings⁽¹⁾

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V_{CC}	Supply voltage range	-0.5	7	V
V_I	Input voltage range ⁽²⁾	-0.5	7	
V_{IO}	Switch I/O voltage range ^{(2) (3)}	-0.5	$V_{CC} + 0.5$	
I_{IK}	Input clamp current	$V_I < 0$	-20	mA
I_{IOK}	I/O diode current	$V_{IO} < 0$	-50	
I_T	Switch through current	$V_{IO} = 0$ to V_{CC}	±25	
Continuous current through V_{CC} or GND			±50	
T_{stg}	Storage temperature range	-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input and output negative-voltage ratings may be exceeded if the input and output current ratings are observed.
- (3) The maximum limit for this value is 5.5 V.

6.2 ESD Ratings

		VALUE	UNIT	
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per AEC Q100-002 ⁽¹⁾	±2000	
		Charged device model (CDM), per AEC Q100-011	Corner pins (2Y0, GND, V_{CC} , and B)	±750
			Other pins	±500

- (1) AEC Q100-002 indicates HBM stressing is done in accordance with the ANSI/ESDA/JEDEC JS-001 specification.

6.3 Recommended Operating Conditions⁽¹⁾

		MIN	NOM	MAX	UNIT
V_{CC}	Supply voltage	2 ⁽²⁾		5.5	V
V_{IH}	High-level input voltage, control inputs	$V_{CC} = 2$ V		1.5	V
		$V_{CC} = 2.3$ V to 2.7 V		$V_{CC} \times 0.7$	
		$V_{CC} = 3$ V to 3.6 V		$V_{CC} \times 0.7$	
		$V_{CC} = 4.5$ V to 5.5 V		$V_{CC} \times 0.7$	
V_{IL}	Low-level input voltage, control inputs	$V_{CC} = 2$ V		0.5	V
		$V_{CC} = 2.3$ V to 2.7 V		$V_{CC} \times 0.3$	
		$V_{CC} = 3$ V to 3.6 V		$V_{CC} \times 0.3$	
		$V_{CC} = 4.5$ V to 5.5 V		$V_{CC} \times 0.3$	
V_I	Control input voltage	0		5.5	V
V_{IO}	Input/output voltage	0		V_{CC}	V
$\Delta t/\Delta v$	Input transition rise or fall rate	$V_{CC} = 2.3$ V to 2.7 V		200	ns/V
		$V_{CC} = 3$ V to 3.6 V		100	
		$V_{CC} = 4.5$ V to 5.5 V		20	
T_A	Operating free-air temperature	-40		105	°C
T_A	Operating free-air temperature	-40		125	

- (1) Hold all unused inputs of the device at V_{CC} or GND to ensure proper device operation. See the TI application report, *Implications of Slow or Floating CMOS Inputs*, literature number [SCBA004](#).
- (2) With supply voltages at or near 2 V, the analog switch on-state resistance becomes very nonlinear. TI recommends transmitting only digital signals at these low supply voltages.

6.4 Thermal Information

THERMAL METRIC		SN74LV4052A-Q1		UNIT
		D	PW	
		16 PINS	16 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	85.9	113.3	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	44.6	48.1	°C/W
R _{θJB}	Junction-to-board thermal resistance	43.4	58.4	°C/W
ψ _{JT}	Junction-to-top characterization parameter	13.4	6.2	°C/W
ψ _{JB}	Junction-to-board characterization parameter	43.1	57.8	°C/W

6.5 Operating Characteristics

V_{CC} = 3.3 V, T_A = 25°C (unless otherwise noted)

PARAMETER	TEST CONDITIONS	TYP	UNIT
C _{pd}	Power dissipation capacitance	C _L = 50 pF, f = 10 MHz	11.8 pF

6.6 Electrical Characteristics

over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER	TEST CONDITIONS	V _{CC}	T _A = -40 to 105°C			T _A = -40 to 125°C			UNIT
			MIN	TYP	MAX	MIN	TYP	MAX	
r _{on}	I _T = 2 mA, V _I = V _{CC} or GND, V _{INH} = V _{IL} (see Figure 1)	2.3 V			225			Ω	
		3 V			190		190

8 Detailed Description

8.1 Overview

This device is a dual 4-channel analog multiplexer. A multiplexer is often used when several signals need to share the same device or resource. This device allows the selection of one of these signals at a time for analysis or propagation.

8.2 Functional Block Diagram

8.3 Feature Description

This device contains 2 separate 4-channel multiplexers for use in a variety of applications. The 4-channel multiplexers can also be configured as demultiplexers by using the COM pins as inputs and the 1Yx or 2Yx pins as outputs. This device is qualified for automotive applications and has an extended temperature range of -40C to 125C (maximum depends on package type).

8.4 Device Functional Modes

Table 1. Function Table

INPUTS			ON CHANNEL
INH	B	A	
L	L	L	1Y0, 2Y0
L	L	H	1Y1, 2Y1
L	H	L	1Y2, 2Y2
L	H	H	1Y3, 2Y3
H	X	X	None

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

A multiplexer is used in applications where multiple signals share a resource. In the example below, several different sensors are connected to the analog-to-digital converter (ADC) of a microcontroller (MCU).

9.2 Typical Application

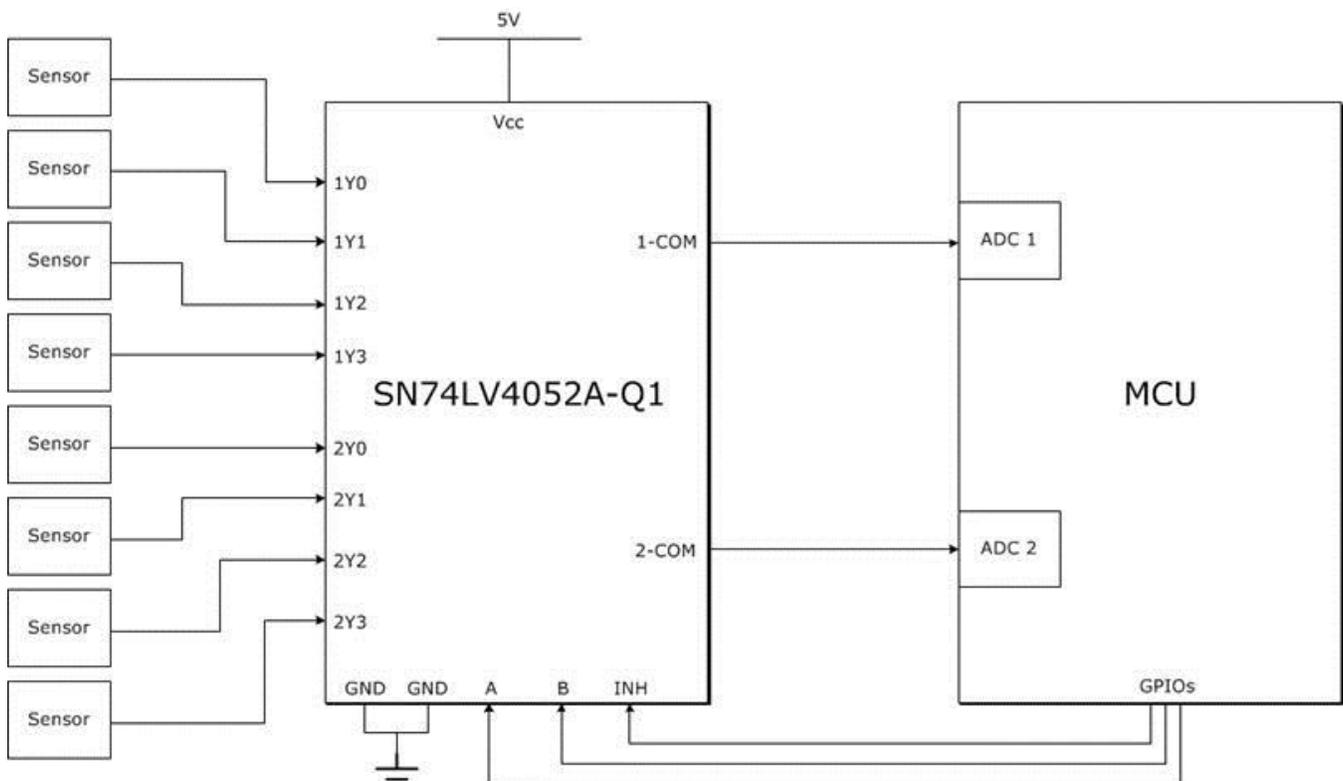

Figure 11. Typical Application Schematic

9.2.1 Design Requirements

Normally processing 8 different analog signals would require 8 separate ADCs, but this figure shows how to achieve this using only 2 ADCs and 3 GPIOs (general purpose input/outputs).

9.2.2 Detailed Design Procedure

To design with the SN74LV4052A-Q1, a stable input voltage between 2V (see [Recommended Operating Conditions](#)⁽¹⁾ for details) and 5.5 V must be available. Another important design consideration would be the characteristics of the signal that is being multiplexed to make sure no important information is lost due to timing or voltage level incompatibility with this device.

(1) Hold all unused inputs of the device at V_{CC} or GND to ensure proper device operation. See the TI application report, *Implications of Slow or Floating CMOS Inputs*, literature number [SCBA004](#).

10 Power Supply Recommendations

Most systems have a common 3.3 V or 5 V rail that may be used to supply the V_{CC} pin of this device. If this is not available, a Switch-Mode-Power-Supply (SMPS) or a Linear Dropout Regulator (LDO) may be used to supply this device from a higher voltage rail.

11 Layout

11.1 Layout Guidelines

In general, it is best to keep signal lines as short and as straight as possible. Incorporation of microstrip or stripline techniques is also recommended when signal lines are greater than 1 inch in length. These traces must be designed with a characteristic impedance of either 50Ω or 75Ω , as required by the application. Be careful placing this device too close to high voltage switching components, as they may cause interference.

11.2 Layout Example

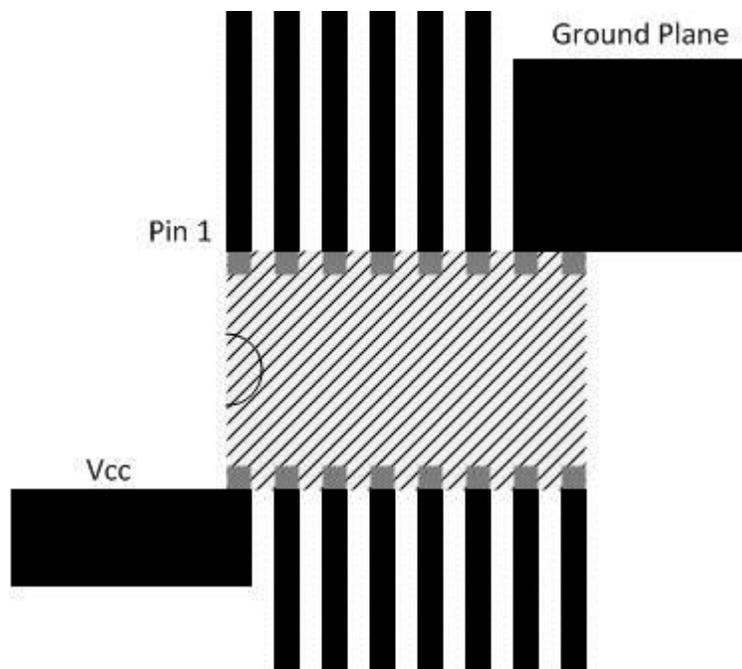

Figure 12. Layout Example Schematic

12 Device and Documentation Support

12.1 Trademarks

All trademarks are the property of their respective owners.

12.2 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

12.3 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties.  - Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
