

DATA SHEET

SKY65126-21: 800-900 MHz High Linearity 2 W Power Amplifier

Applications

- WCDMA/CDMA/TDMA/GSM/LTE
- Repeaters
- WLL and ISM band transmitters
- Mobile radios
- Femto cell base stations

Features

- High linearity: OIP3 > +48 dBm
- P1dB = +32.5 dBm
- ACLR ≤ -45 dBc for P_{OUT} = +24.5 dBm
- EVM < 3% for P_{OUT} = +25 dBm (OFDM, 64-QAM)
- High efficiency: PAE = 29%
- Output power detector: 20 dB dynamic range
- High gain = 32 dB
- Internal RF match and bias circuits
- Single DC supply: 5 V
- Small footprint, MCM (20-pin, 6 x 6 mm) SMT package (MSL3, 260 °C per JEDEC J-STD-020)

Skyworks Pb-free products are compliant with all applicable legislation. For additional information, refer to *Skyworks Definition of Lead (Pb)-Free*, document number SQ04-0073.

Description

Skyworks SKY65126-21 is a fully-matched, surface mount Power Amplifier (PA) designed for WCDMA, CDMA, TDMA, GSM, and LTE radio, repeaters, transmitters, mobile radios, and Femto cell base station applications operating in the 800 to 900 MHz band.

The device is fabricated using Skyworks GaAs Heterojunction Bipolar Transistor (HBT) process, which allows for single supply operation while maintaining high efficiency and good linearity.

A block diagram of the SKY65126-21 is shown in Figure 1. The device package and pinout for the 20-pin MCM are shown in Figure 2.

Figure 2. SKY65126-21 Pinout – 20-Pin MCM (Top View)

Table 1. SKY65126-21 Signal Descriptions

Pin #	Name	Description	Pin #	Name	Description
1	GND	Ground	11	VCC2	Stage 2 collector voltage
2	GND	Ground	12	N/C	No connection
3	GND	Ground	13	VCC1	Stage 1 collector voltage
4	VC_BIAS	Bias voltage	14	N/C	No connection
5	N/C	No connection	15	N/C	No connection
6	VREF1	Bias reference voltage 1	16	RF_IN	RF input
7	VREF2	Bias reference voltage 2	17	GND	Ground
8	GND	Ground	18	N/C	No connection
9	RF_OUT	RF output	19	GND	Ground
10	GND	Ground	20	GND	Ground

Table 2. SKY65126-21 Absolute Maximum Ratings

Parameter	Symbol	Minimum	Maximum	Units
RF input power	PIN		0	dBm
Supply voltage	VC_BIAS, VREF1, VREF2, VCC1, and VCC2		6	V
Operating temperature	TOP	−40	+85	°C
Storage temperature	TST	−55	+125	°C
Junction temperature	TJ		+150	°C
Thermal resistance	ΘJC		20	°C/W

Note: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

CAUTION: Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

Technical Description

The SKY65126-21 PA contains two amplifier stages. The matching circuits for the input stage, interstage, and output stage are contained within the device. An on-chip active bias circuit is included within the device for both input and output stages, which provides excellent gain tracking over temperature and voltage variations.

The SKY65126-21 is internally matched for optimum linearity and efficiency. The input and output stages are independently supplied using the VCC1 and VCC2 supply lines (pins 13 and 11, respectively). The bias reference voltages for stages 1 and 2 are supplied using common lines VREF1 and VREF2 (pins 6 and 7, respectively). The DC control voltage that sets the bias to stages 1 and 2 is supplied by the VC_BIAS signal (pin 4).

Electrical and Mechanical Specifications

Signal pin assignments and functional pin descriptions are described in Table 1. The absolute maximum ratings of the SKY65126-21 are provided in Table 2. Recommended operating conditions are specified in Table 3 and electrical specifications are provided in Table 4.

Typical performance characteristics are shown in Figures 3 through 7.

Table 3. SKY65126-21 Recommended Operating Conditions

Parameter	Symbol	Minimum	Typical	Maximum	Units
Supply voltage	VC_BIAS, VREF1, VREF2, VCC1, and VCC2		5		V
Operating frequency	f	800		900	MHz
Operating temperature	TOP	-40	+25	+85	°C

Table 4. SKY65126-21 Electrical Specifications (Note 1)

(VCC1 = VCC2 = VREF1 = VREF2 = VC_BIAS = 5 V, Tc = +25 °C, f = 850 MHz, Unless Otherwise Noted)

Parameter	Symbol	Test Condition	Min	Typical	Max	Units
Frequency	f		800		900	MHz
Small signal gain	S21		30	32		dB
Input return loss (small signal)	S11		9	11		dB
Output return loss (small signal)	S22		12	17		dB
1 dB Output Compression Point	OP1dB	CW	+30.5	+32.5		dBm
3 rd Order Output Intercept Point	OIP3	POUT/tone = +19 dBm, tone spacing = 1 MHz	+45	+48		dBm
Noise Figure	NF	CW		4.5	6.0	dB
Adjacent Channel Leakage Ratio @ POUT = +24.5 dBm	ACLR	WCDMA test tone #1: 64 DPCH, Δf = 5 MHz		-47	-45	dBc
Quiescent Current	ICCQ	No RF signal		283	340	mA
Operational current	IOP	POUT = +25 dBm		540	650	mA

Note 1: Performance is guaranteed only under the conditions listed in this Table.**Typical Performance Characteristics**

(VCC1 = VCC2 = VREF1 = VREF2 = VC_BIAS = 5 V, Tc = +25 °C, f = 850 MHz, Unless Otherwise Noted)

Evaluation Board Description

The SKY65126-21 Evaluation Board is used to test the performance of the SKY65126-21 PA. An Evaluation Board schematic diagram is provided in Figure 8. Table 5 provides the Bill of Materials (BOM) list for Evaluation Board components.

An assembly drawing for the Evaluation Board is shown in Figure 9. An Evaluation Board layer detail drawing is shown in Figure 10. Layer detail physical characteristics are noted in Figure 11.

Circuit Design Considerations

The following design considerations are general in nature and must be followed regardless of final use or configuration:

1. Paths to ground should be made as short as possible.
2. The ground pad of the SKY65126-21 has special electrical and thermal grounding requirements. This pad is the main thermal conduit for heat dissipation. Since the circuit board acts as the heat sink, it must shunt as much heat as possible from the device. Therefore, design the connection to the ground pad to dissipate the maximum wattage produced by the circuit board. Multiple vias to the grounding layer are required.

NOTE: A poor connection between the slug and ground increases junction temperature (T_J), which reduces the lifetime of the device.

Evaluation Board Test Procedure

Step 1: Connect RF test equipment to the input/output SMA connectors.

Step 2: Connect DC ground.

Step 3: Connect all VDD, VREG, and VC_BIAS lines to a +5 V supply. Verify that the I_{CCQ} current is approximately 271 mA.

Step 4: Apply RF signal data at -20 dBm and observe that the output level is approximately +11.5 dBm or that the gain of the device is approximately 31.5 dB.

NOTE: It is important to adjust the VCC1 and VCC2 voltage sources so that +5 V is measured at the board. High collector currents drop the collector voltage significantly if long leads are used. Adjust the bias voltage to compensate.

Application Circuit Notes

Center Ground. It is extremely important to sufficiently ground the bottom ground pad of the device for both thermal and stability reasons. Multiple small vias are acceptable and will work well under the device if solder migration is an issue.

GND (pins 1, 2, 3, 8, 10, 17, 19, and 20). Attach all ground pins to the RF ground plane with the largest diameter and lowest inductance via that the layout allows. Multiple small vias are acceptable and will work well under the device if solder migration is an issue.

N/C (pins 5, 14, 15, and 18). These pins are open and may or may not be connected to ground.

VC_BIAS (pin 4). The bias supply voltage for stages 1 and 2, typically set to +5 V.

VREF1 (pin 6). Bias reference voltage for amplifier stage 1. This signal should be operated over the same voltage range as VCC with a nominal voltage of +5 V.

VREF2 (pin 7). Bias reference voltage for amplifier stage 2. This signal should be operated over the same voltage range as VCC with a nominal voltage of +5 V.

RF_OUT (pin 9). Amplifier RF output pin ($Z_0 = 50 \Omega$). The module includes an onboard internal DC blocking capacitor. All impedance matching is provided internal to the module.

VCC2 (pin 11). Supply voltage for the output (final) stage collector bias (typically +5 V). To bypass VCC2, capacitors C10, C11, and C12 (see Figure 8) should be placed in the approximate location shown on the Evaluation Board, although exact placement is not critical.

VCC1 (pin 13). Supply voltage for the first stage collector bias (typically +5 V). To bypass VCC1, capacitors C6, C7, and C8 (see

Figure 8) should be placed in the approximate location shown on the Evaluation Board, although exact placement is not critical.

RF_IN (pin 16). Amplifier RF input pin ($Z_0 = 50 \Omega$). The module includes an onboard internal DC blocking capacitor. All impedance matching is provided internal to the module.

Package Dimensions

The PCB layout footprint for the SKY65152-11 is shown in Figure 12. Typical case markings are shown in Figure 13. Package dimensions for the 20-pin MCM are shown in Figure 14, and tape and reel dimensions are provided in Figure 15.

Package and Handling Information

Since the device package is sensitive to moisture absorption, it is baked and vacuum packed before shipping. Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY65126-21 is rated to Moisture Sensitivity Level 3 (MSL3) at 250 °C. It can be used for lead or lead-free soldering. For additional information, refer to Skyworks Application Note, *PCB Design and SMT Assembly/Rework Guidelines for MCM-L Packages*, document number 101752.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

All dimensions are in millimeters

Figure 14. SKY65126-21 20-Pin MCM Package Dimensions

Notes:

1. Carrier tape: black conductive polystyrene
2. Cover tape material: transparent conductive PSA
3. Cover tape size: 9.3 mm width
4. All dimensions are in millimeters
5. Ao and Bo measurement point is 0.3 mm from bottom pocket
5. Pin 1 orientation is in top left corner for the following Skyworks products:

SKY65205-11

SKY65208-11

SKY65215-11

For all other 6 x 6 mm MCM/RFLGA products, pin 1 orientation is in top right corner.
