# MQspark

STARTER KIT

Expedite your development with the MQspark, as you rapidly and affordably prototype IoT solutions

BUY YOUR MQSPARK TODAY:
Complete starter kit, including MachineQ gateway and 1-year software license

Use MQcentral and our robust APIs to manage the health of your network including devices and gateways.

Plug and Play IoT Prototyping

Turn your ideas into reality with the MQspark IoT development kit which allows you to prototype your solutions in minutes. With four configurable Grove sensors, you can start to generate and transmit data from your device in minutes. Use our sample code and the open source Arduino IDE to get started and apply your learnings as you build and demonstrate your proof-of-concept application. You can also extend you development kit and explore new ideas by tapping into the expansive suite of Grove sensors available through online electronics retailers.

Your complete starter kit is ideal for rapid development.

- Affordably test new ideas on a scalable platform

- Use your MachineQ gateway to demonstrate the extensive coverage of LoRaWAN®

- Provision and monitor your sensor health using your free 1-year MachineQ software license

- Access an extensive suite of Grove sensors as you adapt your dev kit to new use cases

SENSORS INCLUDED MEASURE:

- Acceleration
- Humidity
- Orientation & Angular Velocity
- Sound
- Temperature
