

CARACTERÍSTICAS GENERALES:

- Tensión de salida sinusoidal
- Frecuencia de salida seleccionable: 50/60Hz
- Alto aislamiento entrada/salida 3000Vrms
- Sincronización trifásica
- Inhibición remota
- Alarma de entrada y salida (OPCIONAL)
- Versión ferroviaria EN50155 (OPCIONAL)

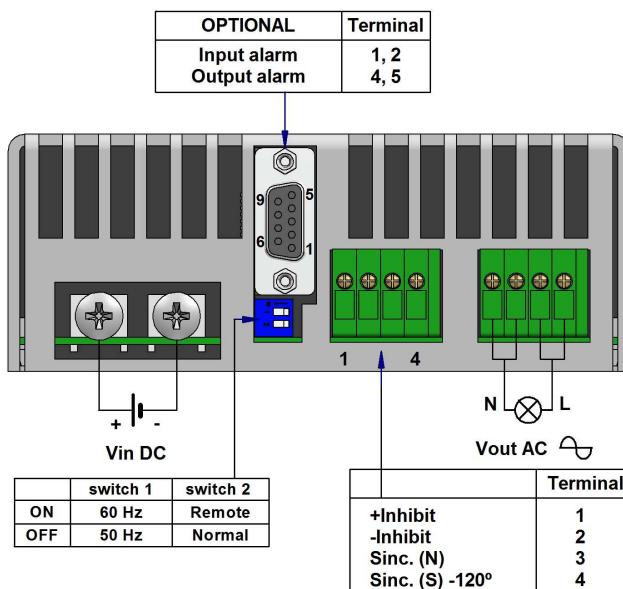

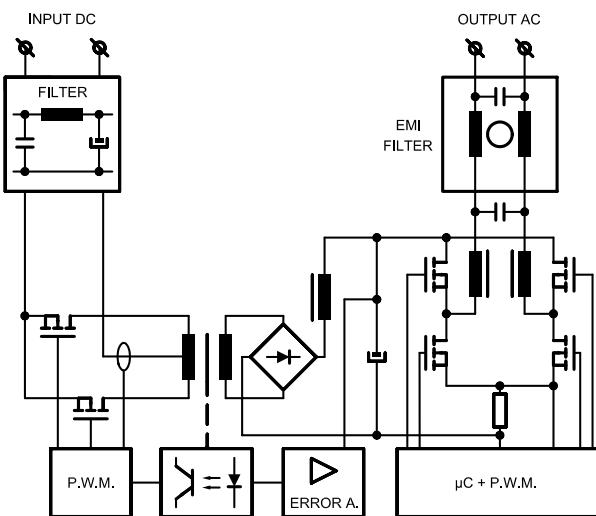

GENERAL FEATURES:

- Sine wave output voltage
- Selectable output frequency: 50/60Hz
- High input-output isolation 3000Vrms
- Three-phase synchronization
- Remote inhibit
- Input and output alarm (OPTIONAL)
- Railway version EN50155 (OPTIONAL)

Connections for a three phase system

DESCRIPCIÓN

La serie ODS-750 está constituida por convertidores de corriente continua a corriente alterna sinusoidal de 120Vca ó 230Vca, con una frecuencia seleccionable de 50Hz ó 60Hz y aislamiento galvánico entre la entrada y la salida.

Los onduladores ODS-750 están formados por dos convertidores en cascada, un convertidor CC/CC que genera, a partir de la tensión de entrada, una tensión intermedia que es ondulada por un segundo convertidor CC/CA a la tensión y frecuencia de salida seleccionadas.

La topología de la primera etapa es de convertidor en contrafase, el cual conmuta a frecuencia fija y proporciona el aislamiento entre la entrada y la salida. El segundo convertidor es un puente totalmente controlado modulado por ancho de pulso (PWM) mediante microcontrolador también a frecuencia fija, y dotado de un filtro de salida LC, que elimina las componentes frecuenciales de conmutación, proporcionando a la salida una tensión sinusoidal.

El ondulador ODS-750 cuenta con una protección contra inversión de polaridad de entrada mediante fusible. También dispone de una protección de potencia media máxima y otra de corriente de pico de máxima en la salida. Esto protege a los semiconductores incluso ante cortocircuitos en la salida. Además dispone de inhibición por subtensión de entrada, lo cual, protege las baterías contra descargas destructivas.

DESCRIPTION

The ODS-750 consists of sine-wave 120Vac or 230Vac output voltage DC-AC converters. The frequency can be set to 50Hz or 60 Hz, and input and output are galvanically isolated.

The ODS-750 inverters consist of two cascaded converters, one DC-DC generating an intermediate output voltage from the input voltage. That intermediate voltage is inverted to supply the output voltage and frequency by means of a second DC/AC converter.

The topology for the first converter is a fixed frequency push-pull type that provides the isolation between input and output. The second converter consists of a bridge inverter also at fixed frequency and fully PWM controlled by means of microcontroller that is equipped with an LC output filter that removes the switching frequency components and delivers a sine-wave output.

The ODS-750 inverter is equipped with an input polarity protection by means of fuse. It also features maximum average power protection as well as maximum output peak current protection. This protects the semiconductors even when an output short-circuit occurs. It also features a disable function for input undervoltage, which protects the batteries from harmful discharges.

INSTALACIÓN

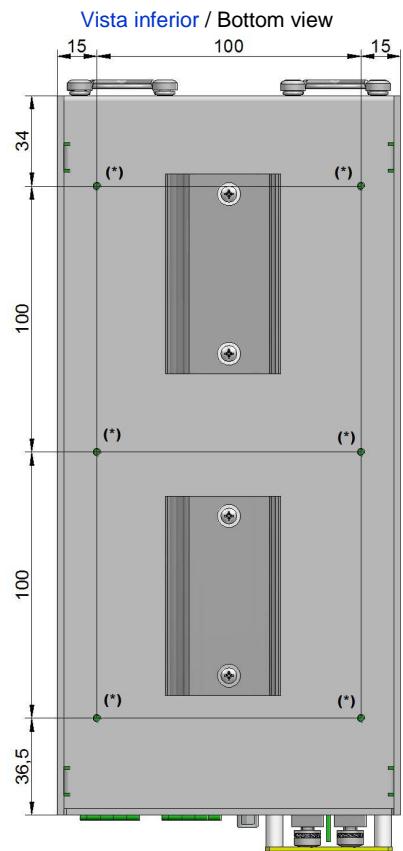

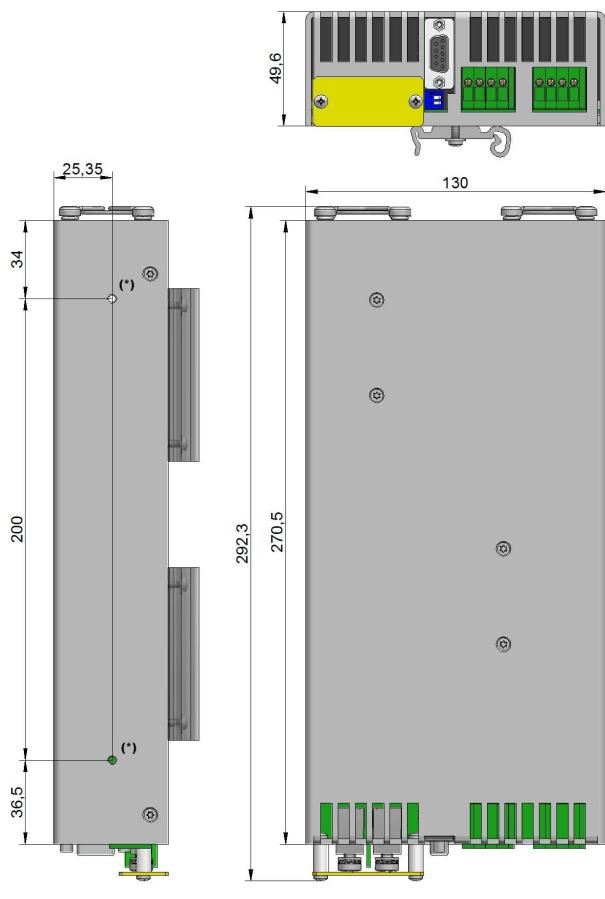

- El aparato incluye 10 taladros roscados M3 que permiten distintas posiciones de montaje.
- Efectuar la conexión según la tabla.
- La frecuencia de salida por defecto es 50Hz. Si se requiere 60Hz actuar el dip-switch según la figura.
- El ondulador está protegido contra sobrecargas activas pero no lo está contra sobrecargas reactivas prolongadas, por tanto no debe sobrepasarse la potencia máxima indicada en VA.

Por motivos de seguridad es necesario:

Proporcionar al equipo una envolvente de protección conforme a las directivas de seguridad eléctrica del país donde sea instalado.

Incorporar un fusible en serie con la entrada de 60A y 50A para los modelos de 12V y 24V de entrada respectivamente.

Usar conductores de sección apropiada para conectar entradas y salidas. En la tabla siguiente se muestran las corrientes máximas y las secciones mínimas de los conductores para cada una de las conexiones de potencia.

(*) Taladro roscados M3. Profundidad máxima del tornillo: 3mm
M3 threaded hole. Maximum screw depth: 3mm

	Entrada 12Vcc	Entrada 24Vcc	Entrada 48Vcc	Entrada 110Vcc	Salida 120Vca	Salida 230Vca
Corriente máxima	60 A	50 A	25 A	12 A	6.7 A	3.5 A
Sección cable	10 mm ²	10 mm ²	2.5 mm ²	1.5 mm ²	1 mm ²	0.75 mm ²

INSTALLATION

- The device includes 10 M3 threaded holes that allows different mounting positions.
- Make connections as shown in the table.
- The default output frequency is 50Hz. For 60Hz simply actuate the dip-switch as indicated in the figure.
- The inverter includes active overload protection but does not provide protection against prolonged reactive overload conditions. Therefore, the maximum power output (VA) should not be exceeded.

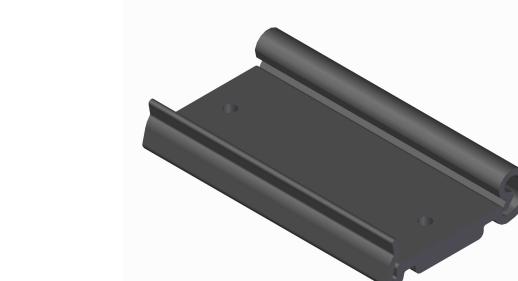

For safety reasons, the following requirements must be met:

- Provide the equipment with some kind of protective enclosure that complies with the electrical safety directives in effect within the country where the equipment is installed.
- Add an external fuse of 60A and 50A for the models of input voltage 12V and 24V respectively.
- Use cables of adequate cross-section to connect inputs and outputs. The following table lists the maximum currents and the minimum cross-sections for the cables used for each power connection.

	Input 12Vcc	Input 24Vcc	Input 48Vcc	Input 110Vcc	Input 120Vca	Input 230Vca
Maximum current	60 A	50 A	25 A	12 A	6.7 A	3.5 A
Cable section	10 mm ²	10 mm ²	2.5 mm ²	1.5 mm ²	1 mm ²	0.75 mm ²
