

- 200 ms (typ)  $t_{rec}$
- Watchdog timer - 1.6 s (typ)
- Manual reset input ( $\overline{MR}$ )
- Power-fail comparator (PFI/ $\overline{PFO}$ )
- Low supply current - 40  $\mu$ A (typ)
- Guaranteed  $\overline{RST}$  (RST) assertion down to  $V_{CC} = 1.0$  V
- Operating temperature:
  - $-40$  °C to  $85$  °C (industrial grade) or
  - $-40$  °C to  $125$  °C (automotive grade for the STM706 only)
- RoHS compliance
  - Lead-free components are compliant with the RoHS directive

1. Contact local ST sales office for availability.

## Features

- 5 V operating voltage
- Precision  $V_{CC}$  monitor
  - STM705/707/813L
  - $4.50$  V  $\leq V_{RST} \leq 4.75$  V
  - STM706/708
  - $4.25 \leq V_{RST} \leq 4.50$  V
- RST and  $\overline{RST}$  outputs

# 1 Description

The STM705/706/707/708/813L supervisors are self-contained devices which provide microprocessor supervisory functions. A precision voltage reference and comparator monitors the  $V_{CC}$  input for an out-of-tolerance condition. When an invalid  $V_{CC}$  condition occurs, the reset output ( $\overline{RST}$ ) is forced low (or high in the case of RST).

These devices also offer a watchdog timer (except for STM707/708) as well as a power-fail comparator to provide the system with an early warning of impending power failure.

These devices are available in a standard 8-pin SOIC package or a space-saving 8-pin TSSOP package.

**Figure 1. Logic diagram (STM705/706/813L)**

## 2 Pin descriptions

### 2.1 $\overline{\text{MR}}$

A logic low on  $\overline{\text{MR}}$  asserts the reset output. Reset remains asserted as long as  $\overline{\text{MR}}$  is low and for  $t_{\text{rec}}$  after  $\overline{\text{MR}}$  returns high. This active-low input has an internal pull-up. It can be driven from a TTL or CMOS logic line, or shorted to ground with a switch. Leave open if unused.

### 2.2 WDI

If WDI remains high or low for 1.6 s, the internal watchdog timer runs out and reset (or  $\overline{\text{WDO}}$ ) is triggered. The internal watchdog timer clears while reset is asserted or when WDI sees a rising or falling edge.

The watchdog function can be disabled by allowing the WDI pin to float.

### 2.3 $\overline{\text{WDO}}$

It goes low when a transition does not occur on WDI within 1.6 s, and remains low until a transition occurs on WDI (indicating the watchdog interrupt has been serviced).  $\overline{\text{WDO}}$  also goes low when  $V_{\text{CC}}$  falls below the reset threshold; however, unlike the reset output,  $\overline{\text{WDO}}$  goes high as soon as  $V_{\text{CC}}$  exceeds the reset threshold. Output type is push-pull.

*Note:* For those devices with a  $\overline{\text{WDO}}$  output, a watchdog timeout will not trigger reset unless  $\overline{\text{WDO}}$  is connected to  $\overline{\text{MR}}$ .

### 2.4 $\overline{\text{RST}}$

Pulses low when triggered, and stays low whenever  $V_{\text{CC}}$  is below the reset threshold or when  $\overline{\text{MR}}$  is a logic low. It remains low for  $t_{\text{rec}}$  after either  $V_{\text{CC}}$  rises above the reset threshold, or  $\overline{\text{MR}}$  goes from low to high.

### 2.5 RST

Goes high with triggered, and stays high whenever  $V_{\text{CC}}$  is above the reset threshold or when  $\overline{\text{MR}}$  is a logic high. It stays high for  $t_{\text{rec}}$  after either  $V_{\text{CC}}$  falls below the reset threshold, or  $\overline{\text{MR}}$  goes from high to low.

### 2.6 PFI

When PFI is less than  $V_{\text{PFI}}$ ,  $\overline{\text{PFO}}$  goes low; otherwise,  $\overline{\text{PFO}}$  remains high. Connect to ground if unused.

# 2.7 $\overline{\text{PFO}}$

When PFI is less than  $V_{\text{PFI}}$ ,  $\overline{\text{PFO}}$  goes low; otherwise,  $\overline{\text{PFO}}$  remains high. Leave open if unused. Output type is push-pull.

Table 3. Pin description

| Pin     |                  |                  | Name                    | Function                      |

## 3 Operation

### 3.1 Reset output

The STM705/706/707/708/813L supervisor asserts a reset signal to the MCU whenever  $V_{CC}$  goes below the reset threshold ( $V_{RST}$ ), a watchdog time-out occurs (if  $\overline{WDO}$  is tied to  $\overline{MR}$ ), or when the push-button reset input ( $\overline{MR}$ ) is taken low.  $\overline{RST}$  is guaranteed to be a logic low (logic high for STM707/708/813L) for  $V_{CC} < V_{RST}$  down to  $V_{CC} = 1$  V for  $T_A = 0$  °C to 85 °C.

During power-up, once  $V_{CC}$  exceeds the reset threshold an internal timer keeps  $\overline{RST}$  low for the reset time-out period,  $t_{rec}$ . After this interval  $\overline{RST}$  returns high.

If  $V_{CC}$  drops below the reset threshold,  $\overline{RST}$  goes low. Each time  $\overline{RST}$  is asserted, it stays low for at least the reset time-out period ( $t_{rec}$ ). Any time  $V_{CC}$  goes below the reset threshold the internal timer clears. The reset timer starts when  $V_{CC}$  returns above the reset threshold.

### 3.2 Push-button reset input

A logic low on  $\overline{MR}$  asserts reset. Reset remains asserted while  $\overline{MR}$  is low, and for  $t_{rec}$  (see [Figure 29](#)) after it returns high. The  $\overline{MR}$  input has an internal 40  $\Omega$  pull-up resistor, allowing it to be left open if not used. This input can be driven with TTL/CMOS-logic levels or with open-drain/ collector outputs. Connect a normally open momentary switch from  $\overline{MR}$  to GND to create a manual reset function; external debounce circuitry is not required. If  $\overline{MR}$  is driven from long cables or the device is used in a noisy environment, connect a 0.1  $\mu$ F capacitor from  $\overline{MR}$  to GND to provide additional noise immunity.  $\overline{MR}$  may float, or be tied to  $V_{CC}$  when not used.

### 3.3 Watchdog input (STM705/706/813L)

The watchdog timer can be used to detect an out-of-control MCU. If the MCU does not toggle the Watchdog Input (WDI) within  $t_{WD}$  (1.6 s), the reset is asserted. The internal 1.6s timer is cleared by either:

1. a reset pulse, or
2. by toggling WDI (high-to-low or low-to-high), which can detect pulses as short as 50 ns. If WDI is tied high or low, a reset pulse is triggered every 1.8 s ( $t_{WD} + t_{rec}$ ), if  $\overline{WDO}$  is connected to  $\overline{MR}$ .

See [Figure 30](#) for STM705/706/813L.

The timer remains cleared and does not count for as long as reset is asserted. As soon as reset is released, the timer starts counting.

**Note:** *The watchdog function may be disabled by floating WDI or tri-stating the driver connected to WDI. When tri-stated or disconnected, the maximum allowable leakage current is 10  $\mu$ A and the maximum allowable load capacitance is 200 pF.*

### 3.4 Watchdog output (STM705/706/813L)

When  $V_{CC}$  drops below the reset threshold,  $\overline{WDO}$  will go low even if the watchdog timer has not yet timed out. However, unlike the reset output,  $\overline{WDO}$  goes high as soon as  $V_{CC}$  exceeds the reset threshold.  $\overline{WDO}$  may be used to generate a reset pulse by connecting it to the  $\overline{MR}$  input.

### 3.5 Power-fail input/output

The power-fail input (PFI) is compared to an internal reference voltage (independent from the  $V_{RST}$  comparator). If PFI is less than the power-fail threshold ( $V_{PFI}$ ), the power-fail output ( $\overline{PFO}$ ) will go low. This function is intended for use as an undervoltage detector to signal a failing power supply. Typically PFI is connected through an external voltage divider (see [Figure 9](#)) to either the unregulated DC input (if it is available) or the regulated output of the  $V_{CC}$  regulator. The voltage divider can be set up such that the voltage at PFI falls below  $V_{PFI}$  several milliseconds before the regulated  $V_{CC}$  input to the STM705/706/707/708/ 813L or the microprocessor drops below the minimum operating voltage.

If the comparator is unused, PFI should be connected to  $V_{SS}$  and  $\overline{PFO}$  left unconnected.  $\overline{PFO}$  may be connected to  $\overline{MR}$  on the STM703/704/818 so that a low voltage on PFI will generate a reset output.

### 3.6 Ensuring a valid reset output down to $V_{CC} = 0$ V

When  $V_{CC}$  falls below 1 V, the state of the  $\overline{RST}$  output can no longer be guaranteed, and becomes essentially an open circuit. If a high value pulldown resistor is added to the  $\overline{RST}$  pin, the output will be held low during this condition. A resistor value of approximately 100 k $\Omega$  will be large enough to not load the output under operating conditions, but still sufficient to pull  $\overline{RST}$  to ground during this low voltage condition (see [Figure 10](#)).

Figure 10. Reset output valid to ground circuit

### 3.7 Interfacing to microprocessors with bidirectional reset pins

Microprocessors with bidirectional reset pins can contend with the STM705-708 reset output. For example, if the reset output is driven high and the micro wants to pull it low, signal contention will result. To prevent this from occurring, connect a 4.7 k $\Omega$  resistor between the reset output and the micro's reset I/O as in [Figure 11](#).

**Figure 11. Interfacing to microprocessors with bidirectional reset I/O**

## 4 Typical operating characteristics

Typical values are at  $T_A = 25\text{ }^{\circ}\text{C}$ .

## 5 Maximum ratings

Stressing the device above the rating listed in the absolute maximum ratings table may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the operating sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

**Table 4. Absolute maximum ratings**

| Symbol          | Parameter                              | Value                  | Unit |
|-----------------|----------------------------------------|------------------------|------|
| $T_{STG}$       | Storage temperature ( $V_{CC}$ Off)    | -55 to 150             | °C   |
| $T_{SLD}^{(1)}$ | Lead solder temperature for 10 seconds | 260                    | °C   |
| $V_{IO}$        | Input or output voltage                | -0.3 to $V_{CC} + 0.3$ | V    |
| $V_{CC}$        | Supply voltage                         | -0.3 to 7.0            | V    |
| $I_O$           | Output current                         | 20                     | mA   |
| $P_D$           | Power dissipation                      | 320                    | mW   |

1. Reflow at peak temperature of 260 °C. The time above 255 °C must not exceed 30 seconds.

6 DC and AC parameters

This section summarizes the operating and measurement conditions, and the DC and AC characteristics of the device. The parameters in the DC and AC characteristics tables that follow, are derived from tests performed under the measurement conditions summarized in [Table 5](#). Designers should check that the operating conditions in their circuit match the operating conditions when relying on the quoted parameters.

Table 5. Operating and AC measurement conditions

| Parameter                                       | STM705/706/707/708; STM813L | Unit |
|-------------------------------------------------|-----------------------------|------|
| V <sub>CC</sub> supply voltage                  | 1.0 to 5.5                  | V    |
| Ambient operating temperature (T <sub>A</sub> ) | −40 to 85                   | °C   |
| Input rise and fall times                       | ≤ 5                         | ns   |

1. Valid for ambient operating temperature: T<sub>A</sub> = -40 to 85 °C; V<sub>CC</sub> = 4.75 V to 5.5 V for STM705/707/813L; V<sub>CC</sub> = 4.5 V to 5.5 V for STM706/708 (except where noted).

2. V<sub>CC</sub> (min) = 1.0 V for T<sub>A</sub> = 0 °C to +85 °C.

3. For V<sub>CC</sub> falling.

## 7 Package mechanical data

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK<sup>®</sup> packages, depending on their level of environmental compliance. ECOPACK<sup>®</sup> specifications, grade definitions and product status are available at: [www.st.com](http://www.st.com). ECOPACK<sup>®</sup> is an ST trademark.

|-------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Sep-2003    | 1        | Initial release.                                                                                                                                                                                                                                                                                                                                                 |
| 31-Oct-2003 | 1.1      | Update <a href="#">Table 6</a> .                                                                                                                                                                                                                                                                                                                                 |
| 12-Dec-2003 | 2        | Reformatted; update characteristics ( <a href="#">Figure 1</a> , <a href="#">2</a> , <a href="#">3</a> , <a href="#">4</a> , <a href="#">6</a> , <a href="#">8</a> , <a href="#">9</a> , <a href="#">10</a> , <a href="#">28</a> ; <a href="#">29</a> , <a href="#">30</a> , <a href="#">Table 7</a> , <a href="#">9</a> , <a href="#">11</a> )                  |
| 16-Jan-2004 | 2.1      | Add typical characteristics ( <a href="#">Figure 12</a> to <a href="#">18</a> , <a href="#">20</a> to <a href="#">26</a> )                                                                                                                                                                                                                                       |
| 09-Apr-2004 | 3        | Reformatted; update characteristics ( <a href="#">Figure 14</a> , <a href="#">18</a> , <a href="#">20</a> to <a href="#">23</a> , <a href="#">26</a> ; <a href="#">Table 7</a> )                                                                                                                                                                                 |
| 25-May-2004 | 4        | Update characteristics ( <a href="#">Table 4</a> , <a href="#">7</a> )                                                                                                                                                                                                                                                                                           |
| 02-Jul-2004 | 5        | Document promoted; corrected waveform ( <a href="#">Figure 28</a> )                                                                                                                                                                                                                                                                                              |
| 21-Sep-2004 | 6        | Clarify root part numbers, pin descriptions ( <a href="#">Figure 2</a> , <a href="#">3</a> , <a href="#">10</a> ; <a href="#">Table 6</a> , <a href="#">7</a> , <a href="#">10</a> )                                                                                                                                                                             |
| 08-Mar-2005 | 7        | Update typical characteristics ( <a href="#">Figure 12</a> to <a href="#">26</a> )                                                                                                                                                                                                                                                                               |
| 02-Nov-2009 | 8        | Updated <a href="#">Table 1</a> , <a href="#">3</a> , <a href="#">4</a> , <a href="#">6</a> , <a href="#">9</a> , <a href="#">Section 2.3</a> , <a href="#">Section 2.7</a> , text in <a href="#">Section 7</a> .                                                                                                                                                |
| 06-Aug-2010 | 9        | Updated <a href="#">Features</a> , <a href="#">Section 4: Typical operating characteristics</a> , <a href="#">Table 9</a> .                                                                                                                                                                                                                                      |
| 26-Mar-2014 | 10       | Added automotive grade option for the STM706 to <a href="#">Features</a> , <a href="#">Table 1: Device summary</a> , and <a href="#">Table 9: Ordering information scheme</a><br>Removed shipping option in tubes from <a href="#">Table 9: Ordering information scheme</a><br>Added footnote <a href="#">1</a> to <a href="#">Table 10: Marking description</a> |

**Please Read Carefully:**

Information in this document is provided solely in connection with ST products. STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, modifications or improvements, to this document, and the products and services described herein at any time, without notice.

All ST products are sold pursuant to ST's terms and conditions of sale.

Purchasers are solely responsible for the choice, selection and use of the ST products and services described herein, and ST assumes no liability whatsoever relating to the choice, selection or use of the ST products and services described herein.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted under this document. If any part of this document refers to any third party products or services it shall not be deemed a license grant by ST for the use of such third party products or services, or any intellectual property contained therein or considered as a warranty covering the use in any manner whatsoever of such third party products or services or any intellectual property contained therein.

**UNLESS OTHERWISE SET FORTH IN ST'S TERMS AND CONDITIONS OF SALE ST DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY WITH RESPECT TO THE USE AND/OR SALE OF ST PRODUCTS INCLUDING WITHOUT LIMITATION IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE (AND THEIR EQUIVALENTS UNDER THE LAWS OF ANY JURISDICTION), OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT.**

**ST PRODUCTS ARE NOT DESIGNED OR AUTHORIZED FOR USE IN: (A) SAFETY CRITICAL APPLICATIONS SUCH AS LIFE SUPPORTING, ACTIVE IMPLANTED DEVICES OR SYSTEMS WITH PRODUCT FUNCTIONAL SAFETY REQUIREMENTS; (B) AERONAUTIC APPLICATIONS; (C) AUTOMOTIVE APPLICATIONS OR ENVIRONMENTS, AND/OR (D) AEROSPACE APPLICATIONS OR ENVIRONMENTS. WHERE ST PRODUCTS ARE NOT DESIGNED FOR SUCH USE, THE PURCHASER SHALL USE PRODUCTS AT PURCHASER'S SOLE RISK, EVEN IF ST HAS BEEN INFORMED IN WRITING OF SUCH USAGE, UNLESS A PRODUCT IS EXPRESSLY DESIGNATED BY ST AS BEING INTENDED FOR "AUTOMOTIVE, AUTOMOTIVE SAFETY OR MEDICAL" INDUSTRY DOMAINS ACCORDING TO ST PRODUCT DESIGN SPECIFICATIONS. PRODUCTS FORMALLY ESCC, QML OR JAN QUALIFIED ARE DEEMED SUITABLE FOR USE IN AEROSPACE BY THE CORRESPONDING GOVERNMENTAL AGENCY.**

Resale of ST products with provisions different from the statements and/or technical features set forth in this document shall immediately void any warranty granted by ST for the ST product or service described herein and shall not create or extend in any manner whatsoever, any liability of ST.
