

Angle Position Sensors

AN9 Sensors

Thin, programmable, non-contact magnetic position sensors capable of continuous rotation with dual outputs

Description

The AN9 Series sensors are non-contact, intrinsically linear angle position sensors with two independent outputs. The sensors operate through the use of Hall Effect technology with magnetic fields generated by permanent magnets. They provide a linear change in voltage output (ratiometric to the input voltage) corresponding to an angular rotation of the input shaft.

Features

- Angular position sensor with high tolerance for misalignment
- Non-contact angular position sensing and full 360° rotation
- Dual independent (fully redundant) outputs assure high reliability
- Custom programming available for: angle range, slope, PWM output, custom magnets – contact factory
- No mechanical interface means no parts to wear out or jam
- Comes with 18 AWG 305 mm (12") wire leads
- RoHS Compliant
- IP68*
- Maximum air gap of 5.5 mm (0.22")**

Typical Applications

- Implement (fork lift, agricultural trailer hitch, etc.) position sensing
- Steer, throttle by wire
- Gear selection
- Zero-contact encoder alternative
- Replacement for smart bearings
- Outboard trim sensing
