About the Susumu Group

Susumu was established in 1964 as a pioneer to mass produce thin film components for general purposes. For forty years Susumu has been continuously supplying thin film resistors to computer, telecommunication, peripheral, test equipment, automotive, and multimedia consumers. Recently chip inductors and current sensors were added to our long list of thin film products in order to meet the demand for higher speed, higher frequency, digital and the expanding wireless markets. All products are original in the field of electronic components, derived from our innovative thin film core technology. This core technology allow us to develop miniaturized, reliable, precision, and lower power consumption packages with affordable prices.

Thin Film Technology was established in 1987 in North Mankato, Minnesota, U.S.A. by Susumu for providing thin film resistors to the computer industry. Since then, TFT has developed transmission line delay lines for high speed applications in an ISO 9001 certified factory. These compact, high accuracy delay lines provide high speed timing solutions for microprocessor, automated test equipment, and telecommunications systems. TFT has expanded these popular delay lines into surface mount and chip style packages. TFT is also responsible for expanding thin film component applications in North America by promoting it's sister companies' products, including chip resistors, arrays, attenuators, and inductors. TFT's mission is to provide superior thin film components to every PC board of our customers, hence, thin film on board.

YDS is the most senior member in the Susumu Group. Established in 1940 in Yokohama, Japan. Their first product was a precision carbon film resistor. Gradually, YDS expanded the carbon film technology into attenuators and rotary variable attenuators. In 1975 their technology migrated to thin film. Now YDS concentrates on thin film components for high frequency applications: thin film based chip resistors, chip networks, chip attenuators, SMT temperature variable attenuators, power resistors and power attenuators. YDS is committed to continuously provide thin film value to world wide customers.

Cyntec is the youngest in the Susumu group, established in 1991 as a joint venture between Susumu Co. and Delta Electronics inc. in Taiwan. Cyntec currently concentrates on two product lines including a thin film platinum temperature sensor and thin film chip arrays in an ISO 9002 and QS9000 certified factory, serving the automotive and information technology markets. Cyntec's mission is to develop , market, and produce environmentally friendly high precision electronic components from the view point of energy savings and pollution control.

CONTENTS

thin film components

On Environment	4, 5
Design Supportive Data	6, 7
RG series, ultra-precision & ultra-reliability metal film chip resistors	8, 9
RM series, ultra-precision & ultra-reliability metal film chip network resistors	10, 11
RGH series, high-power and high-precision metal film chip resistors	12
RR series, high-precision metal film chip resistors	13
RR series, RN series, ultra-precision metal film chip resistors	14
Ultra-precision chip network resistors	15, 16
RT series, high-precision trimmable chip resistors	17
RP series, high-power metal film chip resistors	18
RL series, PRL series, low resistance value chip resistors with long-side electrodes for high-precision current detection.	19, 20, 21
High-precision current-detection elements RL,L series:four-terminal type	22
PCMC series, Power Choke Coil	23
RS series, micro array resistor network.	24
RS series, high-integration array resistor networks	25
PFR/GFR series, Thick Film chip resistors	26
RF series, high-precision, high-frequency chip resistors.	27
SA series, high-precision, Pt-film thermal sensors.	28
HPL, TFL series, high-precision, thin-film chip inductors.	29
HTC series, high-precision, thin-film chip capacitors.	30
Thin film chip L,C filter	31, 32
Ball-Grid-Array Thin Film Low-Pass Filter	33
Equalizer	34
P*V series, thermal sensitive chip attenuators.	35
PAT series, RAT series, high-precision chip attenuators	36
PS series, High Precision Power Splitter	37
Positive Emitter Coupled Logic(PECL) Chip Terminators	38
BLIL series, ball-grid-array thin film delay lines / GL series, SOP(small outline package) thin film delay lines	39
CL series, surface-mount thin film delay lines	40
DS/DL series, SIP thin film delay lines	41, 42

thin film components for high-frequnacy

HPL, TFL series, high-precision, thin-film chip inductors.	29
HTC series, high-precision, thin-film chip capacitors.	30
Thin film chip L,C filter	31, 32
Ball-Grid-Array Thin Film Low-Pass Filter	33
Equalizer	34
P*V series, thermal sensitive chip attenuators.	35
PAT series, RAT series, high-precision chip attenuators	36
PS series, High Precision Power Splitter	37

Signal integrity componrnts

RS series, micro array resistor network.	24
RS series, high-integration array resistor networks	25
PFR/GFR series, Thick Film chip resistors	26
Positive Emitter Coupled Logic(PECL) Chip Terminators	38

Sensors

● Current-detection components

RL series, low resistance value chip resistors with long-side electrodes for high-precision current detection.	19, 20, 21, 22

On Environment

Thin Film products by Susumu is environmentally friendly by nature.

- Completely lead free: Our thin film products do not contain any lead even in the areas that are not restricted by RoHS.

The lead free products are designated as **Completely lead free** in the catalogue.

Typical RG/RM construction and composition

Structure	weight % of each structure						Composition of RoHS restricted materials				PBB	PBBe

Products' extremely long life contributes to conserving resources.

Extremely long life products: RG series (page 8), RM series (page 10)

- Thin film resistors are high precision and very reliable by nature. New RG series boasts 8 times longer life compared to our conventional thin film resistors. Under normal usage (normal temp. and humidity), the expected resistance drift is less than 0.1% after 116 years

Comparison to our conventional product

Product series	Type	Judgment Criteria	Years
RG series	Highly reliable thin film chip resistor	0.1% resistance drift	over 116 years
RR series	Thin film chip resistor		14 years

Test Condition: 85°C, 85%RH, 10% rated voltage bias, 90 min. on/30min. off

Thin film enables us to make components smaller, contributing conserving resources.

Example 1: RL series

Power	Conventional type	RL	area %
0.1W	1.6×0.8	0.6×0.3	14%
1W	6.4×3.2	3.7×2.0	36%
2W	11.5×7.0	7.5×2.0	19%

Comparison to our conventional product (unit: mm)

Example 2: RGH series

Power	Conventional type	RGH	area %
1/8W	1.6×0.8	1.0×0.5	39%
1/4W	3.2×1.6	2.0×1.25	48%

Comparison to our conventional product (unit: mm)

SSM Group Companies, as a whole group, strive to create environmentally friendly components.

RoHS compliant products

All our products are RoHS compliant. RoHS compliant products are designated as **RoHS compliant** in the catalogue.

● Ordering and differentiation of RoHS compliant products

We offer RoHS compliant products in all of our product series. Some of these products have RoHS compliant specific part numbers and some do not.

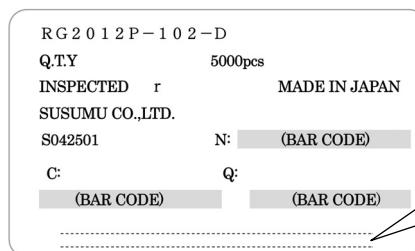

⟨Ordering⟩

- ① Use RoHS compliant specific part numbers or regular part numbers if only lead free products are offered.
- ② Please add a message that you are requiring RoHS compliant parts when ordering products that do not have RoHS compliant specific part numbers. Contact our sales office for details.

⟨Differentiation of RoHS compliant products from lead containing products⟩

RoHS compliant products labels have double broken lines at the bottom of the labels

Example of the label

RG series, ultra-precision & ultra-reliability metal film chip resistors

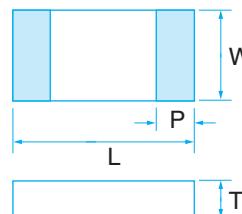

Tight resistance tolerance of $\pm 0.02\%$ and temperature coefficient of resistance of $\pm 5\text{ppm}/^\circ\text{C}$ are achieved. Under high temperature and humid condition of 85°C and $85\%\text{RH}$, and at 155°C (duration:8000 hours for both tests), superior reliability of only less than $\pm 0.1\%$ of change in resistance value is realized.

RoHS compliant

RGH series,high-power and high-precision metal film chip resistors NEW

SSM
THIN FILM TECHNOLOGY

Resistors with high power in small size are realized as 1/4W for $2.0 \times 1.25\text{mm}$ (0805)size,
1/8W for $1.0 \times 0.5\text{mm}$ (0402)size.

Tight resistance tolerance of $\pm 0.1\%$ and temperature coefficient of resistance of
 $\pm 25\text{ppm}/^\circ\text{C}$ are achieved.

Operating temperature range: $-55\sim 155^\circ\text{C}$

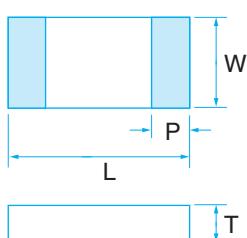

RoHS compliant

Completely lead free

RR series, high-precision metal film chip resistors

SSM
THIN FILM TECHNOLOGY

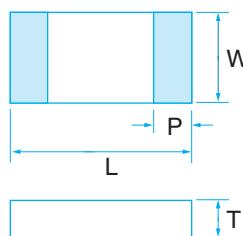

Thin Film Technology has achieved high performance chip resistors with low price and reliable supply. The parts offer excellent performance and tolerance in TCR, current noise, linearity, for high frequency circuit applications. Precise dimensions minimize errors during mounting. Tight tolerance allow for cost saving due to circuit simplification and elimination of trim pots for adjustment.

RL 3720W T - R10 - F - (T1) — Taping Quantity Unit:PRL:T1(1000pcs) T5(5000pcs)

Resistance Value:RLseries:3 digits, PRL series :4 digits

Temperature Coefficient of Resistacce:To be added as for RLseries

RL series, low resistance value chip resistors with short-side electrodes for high-precision current detection.

SSM
THIN FILM TECHNOLOGY

These thin film low resistance value chip resistors are offered in international standard sizes. They exhibit excellent performance in resistance, noise performance, surface heat distribution and a lower surface temperature. Useful in many current sensing applications. Available in 1/10, 1/8 and 1/4 watt package.

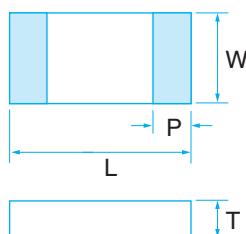

NEW Smallest in the market 0201 low resistance value chip resistor.

RoHS compliant

Type	GL1L	GL2L
Time Delay	0.1~5.0ns(0.1ns step)	0.1~3.0ns(0.1ns step) 3.5~4.5ns(0.5ns step)
Time Delay Tolerance	± 0.05ns	± 0.05ns(0.1~2.9ns) -0.5/+0.1ns(3.0ns) ± 0.1ns(3.5~4.5ns)
Temp. coefficient of Td	0~150ppm/°C	
Characteristic Impedance	50±5Ω	
Rise/fall time	200ps/ns	
Rated Current	100mA	
Operating Temperature	-25~85°C	

PART NUMBER

CL1L, CL2L series, surface-mount thin film delay lines

SSM
THIN FILM TECHNOLOGY

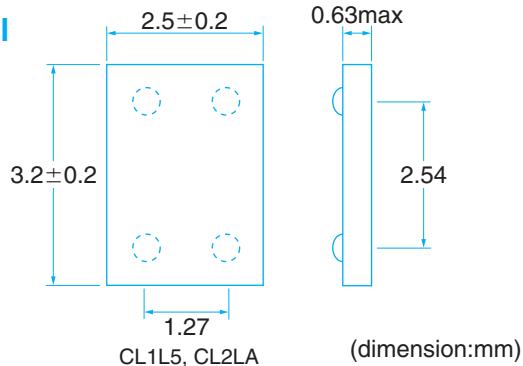

This series permits ultra-precision timing adjustment from 20 to 200 picoseconds with accuracy of \pm picoseconds for ultrahigh-speed signal processing applications.
Differential delay line:CL2L

RoHS compliant Completely lead free

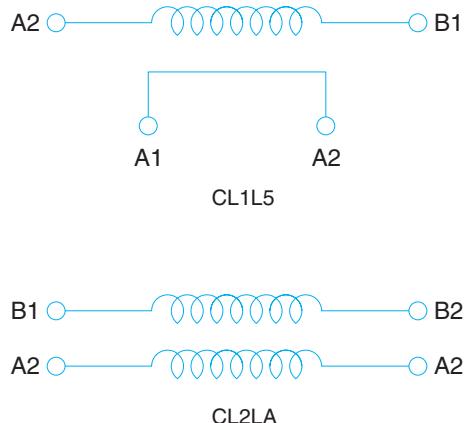

SPECIFICATIONS

Mechanical

Equivalent circuit

Electrical

Type	CL1L5	CL2LA
Time Delay	40~200ps(20ps step)	
Time Delay Tolerance	$\pm 10\%$	
Temp. coefficient of Td	$\pm 100\text{ppm}/^\circ\text{C}$	
Characteristic Impedance	$50\Omega \pm 10\%$	$100\Omega \pm 10\%$
DC Resistance	0.3Ω (100ps or less) $3.0\Omega/\text{ns}$ max(100ps or more)	1.0Ω Max.
Insertion loss	0.5dB or less (at 0.75GHz)	0.5dB or less (at 1.0GHz)
Rated Current	100mA	
Operating temperature	$-40^\circ\text{C} \sim 85^\circ\text{C}$	

PART NUMBER

CL 1L 5 A T 020 L T1 (-C)

Given to RoHS compliant CL2LA series products
Package(T1:1,000pcs, T5:500pcs, TA:1,000pcs)
Serial code (L=CL1L5A, D=CL2LA)
Time Delay (020=200ps)
Termination type (T)
Height code (A)
Impedance (5=50Ω, A=100Ω)
Number of elements (1L=CL1L5, 2L=CL2LA)
Part Code, Number of elements

DS1L series, SIP thin film delay lines

SSM
THIN FILM TECHNOLOGY

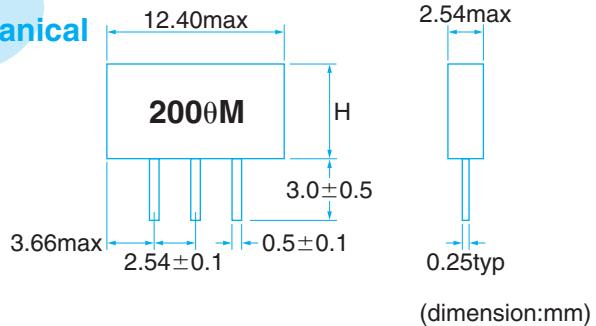

These delay lines provide timing control to 10 nanosecond in a SIP solder lead three pin package. Thin film on ceramic construction provide for high reliability and high bandwidth performance.

RoHS compliant

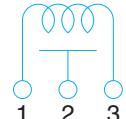

SPECIFICATIONS

Mechanical

Time Delay	H	Form
0.1~5.0ns	6.35max	D
5.5~10.0ns	9.20max	V

Equivalent circuit

Electrical

Type	DS1L
Time Delay range	0.1~2.0ns (0.10ns step) 2.25~5.0ns (0.25ns step) 5.5~10.0ns (0.50ns step)
Time Delay Tolerance	±0.050ns (0.10~0.20ns) ±0.125ns (2.25~5.00ns) ±0.250ns (5.00~10.0ns)
Characteristic Impedance	50±5 Ω

Type	DS1L
DC Resistance	1.0 Ω/ns max
Rated Current	100mA
Temp. coefficient of Td	<150ppm/°C
Insulation resistance	>100M Ω 50V
Operating temperature	-10~+85 °C
Storage Temperature	-40~+125 °C

PART NUMBER

DS1L 5 DJ 200 S (-C)

Given to RoHS compliant products

Serial code

Time Delay(200=2.0ns)

Lead Frame

Impedance(5=50Ω)

Part Code, Number of elements

DL1L series, SIP thin film delay lines

SSM
THIN FILM TECHNOLOGY

Performance to 5 GHz. For many high frequency applications, discrete, tight tolerance(+/-50 picosecond) delay lines can be used to help solve your TTL, and ECL timing and clock deskew needs.

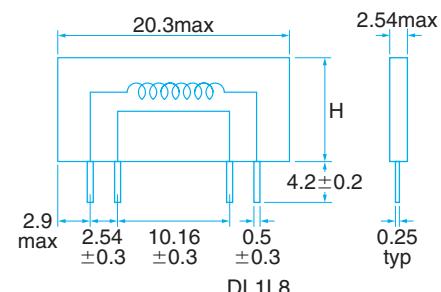

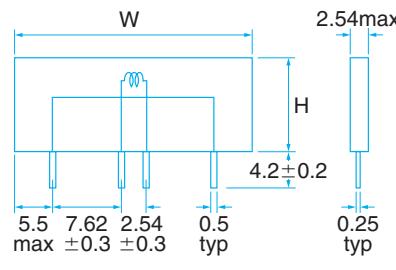

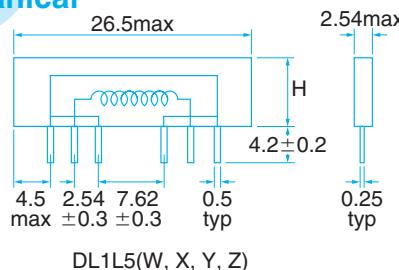

RoHS compliant

	2.05	2.10	2.15	2.21	2.26	2.32	2.37	2.43	2.49	2.55	2.61	2.67	2.74	2.80	2.87
	2.94	3.01	3.09	3.16	3.24	3.32	3.40	3.48	3.57	3.65	3.74	3.83	3.92	4.02	4.12
	4.22	4.32	4.42	4.53	4.64	4.75	4.87	4.99	5.11	5.23	5.36	5.49	5.62	5.76	5.90
	6.04	6.19	6.34	6.49	6.65	6.81	6.98	7.15	7.32	7.50	7.68	7.87	8.06	8.25	8.45
	8.66	8.87	9.09	9.31	9.53	9.76									

Preferred value of resistance shall be composed by significant figures shown in the above table and multipliers including $\times 10\Omega$, $\times 100\Omega$, $\times 1,000\Omega$, $\times 10,000\Omega$, and $\times 100,000\Omega$.

- specifications in this catalogue are subject to change for future improvement without prior notice
- the contents of this catalogue are current as of March 2006
- The Susumu World Group companies, including Susumu Company Ltd., Thin Film Technology Corporation, Yokohama Denshi Seiko Company, Ltd., and Cyntec Company Ltd., do not recommend the use of their products in any life support applications where failure or malfunction of the product can or may cause failure of a life support device or system, or effect in any manner its safety or effectiveness. Should the customer use a product in a life support application then, in that event, the Susumu World Group companies disclaim any and all express or implied warranties as to fitness for any particular purpose or as to merchantability.
- This is Catalog 2006 Volume 1

Caution for mounting the product

<Caution for mounting the product>

- (1) Please be careful not to scratch the protection coating while (pre/after) mounting. Any scratches may lead to the deterioration on durability against moisture.
- (2) When soldering by soldering iron, heating should be done on a land so that the tip of soldering iron will not touch the component itself. Also, if soldering is done at high temperature, please do soldering as short time as possible (less than 3 seconds under 350°C is preferable).
- (3) Remaining flux may lead to deterioration of durability against moisture due to corrosion and occurrence of electrolyte. Specially, if high activating flux, such as chlorine related one, is used, please check its characteristics before using it.
- (4) Adherence and remaining of ionized impurity also may lead to deterioration of durability against moisture due to corrosion and occurrence of electrolyte. Please be careful of not to touch the components with sweated bare hand pre/after mounting.
- (5) High temperature and long soldering may cause the poor soldering on electrode.
- (6) In case of placing resistors in resin after mounting, please pay special attention to the selection for it. It is recommended to check durability against heat and moisture, good shock absorption, and not-containing ionized impurity.

<Environment and conditions of usage>

- (1) Usage and conditions under special environment, it is recommended to confirm the specification and reliability of products. Below conditions are considered as special environments.
 - ① Places where products are immersed in such liquids as water, salt water, oil, acid, and an organic solvent. Or, there is possibility of splash of these liquids.
 - ② Direct sunlight, exposure at outdoor, and dusty environment.
 - ③ A place where condensation is expected.
 - ④ A place where the exposure to toxic gas (sea breeze, HCl, Cl₂, SO₂, H₂S, N₂H₄, NO_x, etc.) is expected.
- (2) When using the product under high temperature and high humidity
 - ① When using the product under high temperature environment, including generation of heat under consideration, please derate the maximum load in accordance with the derating curve stated on the specification.
 - ② When conducting in high moisture environment or the state of condensation, it may lead to the increase in resistance value or break.
- (3) Dissipation, Pulse loading

Please use the product under rated power. Also please set the maximum voltage under rated voltage upon pulse loading.
