

❖ GENERAL DESCRIPTION

AMS1117 is a low dropout positive adjustable or fixed-mode regulator with minimum of 1A output current capability. The product is specifically designed to provide well-regulated supply for low voltage IC applications such as high-speed bus termination and low current 3.3V logic supply. AMS1117 is also well suited for other applications such as VGA cards. AMS1117 is guaranteed to have lower than 1.4V dropout at full load current making it ideal to provide well-regulated outputs of 1.25 to 5.0 with VOUT+1.4V to 12V input supply VOLTAGE.

❖ FEATURES

- 1.4V maximum dropout at full load current
- Fast transient response
- Output current limiting
- Built-in thermal shutdown
- Good noise rejection
- MLCC Capacitors are available.
- 3-Terminal Adjustable or Fixed 1.2V, 1.5V, 1.8V, 2.5V, 3.3V, 5.0V
- Green (RoHS)
- Packages: SOT223, TO252 and SOT89.

❖ BLOCK DIAGRAM

**1A Low Dropout Linear Regulator****❖ PIN ASSIGNMENT**

The packages of AMS1117 are SOT223-3L, TO252-3L and SOT89-3L; the pin assignment is given by:

| Name | Description |
|------------------|---|
| Adj (GND) | A resistor divider from this pin to the V _{OUT} pin and ground sets the output voltage. (Ground only for Fixed-Mode) |
| V _{OUT} | The output of the regulator. (Note1,2) |
| V _{IN} | The input pin of regulator. Typically a large storage capacitor is connected from this pin to ground to insure that the input voltage does not sag below the minimum dropout voltage during the load transient response. This pin must always be 1.5V higher than V _{OUT} in order for the device to regulate properly. (Note1) |

Note1: To prevent oscillation, a 0.2uF minimum X7R or X5R dielectric is strongly recommended if ceramics are used as output capacitors.

Note2: A minimum of 3.3uF EL capacitor to 100uF ($10m\Omega \leq ESR \leq 1\Omega$) must be connected from this pin to ground to insure stability.

Note1: See thermal regulation specifications for changes in output voltage due to heating effects. Line and load regulation are measured at a constant junction temperature by low duty cycle pulse testing. Load regulation is measured at the output lead = 1/16" from the package.

Note2: Line and load regulation are guaranteed up to the maximum power dissipation of 6W. Power dissipation is determined by the difference between input and output differential and the output current. Guaranteed maximum power dissipation will not be available over the full input/output range.

Note3: Quiescent current is defined as the minimum output current required in maintaining regulation. At 12V input/output differential the device is guaranteed to regulate if the output current is greater than 10mA.

Note4: Tab is connected to the multi-layer PCB copper area 5mm*5mm.
