TECHNICAL DETAILS

DESCRIPTION

This potentiometer is a two-in-one, good in a breadboard or with a panel. It's a fairly standard linear taper 10K ohm potentiometer, with a grippy shaft. It's smooth and easy to turn, but not so loose that it will shift on its own. We like this one because the legs are 0.2" apart with pin-points, so you can plug it into a breadboard or perfboard. Once you're done prototyping, you can drill a hole into your project box and mount the potentiometer that way.

TECHNICAL DETAILS

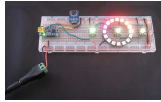

- 10K ohm potentiometer, linear taper
- 100,000 Cycle Life
- 16mm Body
- Rotational travel: 300 °
- Static Stop Strength: 90 oz-in
- Rotational Torque: 0.5 to 1.25 oz-in
