Product description

The SARA-R510AWS is an AWS IoT ExpressLink module based on the u-blox UBX-R5 cellular chipset, aimed at fast and easy development of secure IoT devices.

By bridging the u-blox in-house chipset platform with the market-leading cloud computing services of AWS, this solution provides long-term availability and lifetime support from silicon-to-cloud.

The LTE-M module supports a comprehensive set of 3GPP Rel. 14 features that are relevant for IoT applications, like improvements to power consumption, coverage, data rate, mobility, and positioning.

The embedded AWS IoT ExpressLink certified software provides a new tailored AT command set that paves the way to AWS cloud access straight out-of-the-box, which significantly accelerates time-to-market.

SARA-R510AWS provides AWS cloud service access without the need for the customer to integrate any additional API on their MCU; every single step is handled inside the IoT module. SARA-R510AWS is the perfect fit for new applications requiring accelerated time-to-market. It is also an ideal way to renew resource-constrained legacy applications that cannot accommodate the additional code and APIs that are usually required to access AWS cloud services.

SARA-R510AWS also offers a convenient way to locate your assets with the CellLocate service accessible via ExpressLink AT commands. Combined with an internal, hardware-based secure element, a lightweight set of AT commands, and seamless access to AWS cloud, the solution protects your business-critical data from device to cloud without heavily investing in R&D resources to master provisioning, authentication, certification, and security.
