General Description

The HMC557LC4 is a general purpose double balanced mixer in a leadless RoHS compliant SMT package that can be used as an upconverter or downconverter between 2.5 and 7 GHz. This mixer is fabricated in a GaAs MESFET process, and requires no external components or matching circuitry. The HMC557LC4 provides excellent LO to RF and LO to IF isolation due to optimized balun structures and operates with LO drive levels as low as +9 dBm. The RoHS compliant HMC557LC4 eliminates the need for wire bonding, and is compatible with high volume surface mount manufacturing techniques.

Electrical Specifications, $T_A = +25^\circ\text{C}$, IF= 100 MHz, LO= +15 dBm*

Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1, 5 - 7, 11 - 14, 18 - 24	N/C	No connection required. These pins may be connected to RF/DC ground without affecting performance.	
2, 4, 8, 10, 15, 17	GND	Package bottom must also be connected to RF/DC ground.	
3	LO	This pin is DC coupled and matched to 50 Ohms.	
9	IF	This pin is DC coupled. For applications not requiring operation to DC, this port should be DC blocked externally using a series capacitor whose value has been chosen to pass the necessary IF frequency range. For operation to DC, this pin must not source or sink more than 2 mA of current or part non-function and possible part failure will result.	
16	RF	This pin is DC coupled and matched to 50 Ohms.

[2] Circuit Board Material: Rogers 4350

The circuit board used in this application should use RF circuit design techniques. Signal lines should have 50 ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
